Subject: Initial Site Assessment, Geary Corridor Bus Rapid Transit Project, San Francisco, California

Dear Ms. Avetyan:

Please find enclosed our report documenting the Initial Site Assessment for the proposed Geary Corridor Bus Rapid Transit Project in San Francisco, California. If you have any questions or comments, please contact us at your convenience.

Sincerely,

Yane Nordhav
Principal
Professional Geologist No. 4009

INITIAL SITE ASSESSMENT
Geary Corridor Bus Rapid Transit Project
San Francisco, California

EXECUTIVE SUMMARY

BASELINE Environmental Consulting (“BASELINE”) conducted this Initial Site Assessment (“ISA”) for the Geary Corridor Bus Rapid Transit Project (“Project”) study area (Figure 1). The Project proposes to implement a bus rapid transit system along Geary Boulevard/Street, between 48th Avenue and the south of Market Street area. The purpose of this ISA was to rank the level of risk associated with hazardous materials, hazardous waste, and/or contamination at the Project study area that could potentially affect proposed construction activities and/or operations.

This ISA has identified a medium risk of soil and groundwater contamination from reported hazardous materials releases, aerially-deposited lead, and naturally-occurring asbestos. This ISA has identified a low hazard risk associated with contaminants in historic fill materials, lead-based paint and asbestos-containing materials on structures, and yellow traffic stripes and pavement markings.

BASELINE recommends performing a limited Preliminary Site Investigation (PSI) to characterize the quality of soils (and groundwater if any excavation were to extend into the groundwater) only in the areas of concern identified in this ISA that would be disturbed by Project construction. This would include a limited investigation of soils disturbed for foundations and from excavation of existing medians and the installation and relocation of communication and power utilities. Analytical results should be screened against applicable regulatory thresholds to evaluate appropriate actions to determine appropriate disposal and/or reuse options. Significant dewatering of groundwater from excavations would not be anticipated based on project details, but, if necessary, groundwater should be stored in tank(s) during construction activities and the water quality should be characterized prior to disposal or recycling. A construction risk management plan should be implemented by contractors with procedures for identifying and mitigating previously unknown contamination that may be encountered during construction. This report should be provided to the Project contractors, so the findings may be incorporated into their Health and Safety and Hazards Communication Programs.

INITIAL SITE ASSESSMENT

Geary Corridor Bus Rapid Transit Project

San Francisco, California

1. INTRODUCTION

This report presents the activities and findings of an Initial Site Assessment (“ISA”) performed by BASELINE Environmental Consulting (“BASELINE”) for the proposed Geary Corridor Bus Rapid Transit Project (“Project”) study area, located along Geary Boulevard/Street in San Francisco, California (Figure 1).

1.1. Purpose of the Initial Site Assessment

BASELINE performed this ISA at the request of Jacobs Engineering Group (“JACOBS”) in support of the design and environmental review of the Project. The purpose of this assessment was to rank the level of risk associated with hazardous materials, hazardous waste, and/or contamination at the Project study area that could potentially affect proposed construction activities and/or operations in accordance with Chapter 10 of the California Department of Transportation (“Caltrans”) Environmental Handbook (Caltrans, 2013). In accordance with Caltrans guidance, potential sources of contamination in the study area were identified as Recognized Environmental Conditions (“RECs”) as defined in the American Society of Testing and Materials (“ASTM”) Method E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Assessment Process.

1.2. Scope of Services

The scope of services for this ISA included: review of physical setting sources, historical land use information, and regulatory agency online files and databases; site reconnaissance of current land use conditions; and preparation of this report to document our findings, conclusions, and recommendations. A completed ISA checklist for the Project is included as Appendix A.

2. PROJECT DESCRIPTION

The proposed project involves implementing bus rapid transit (BRT) service along the Geary corridor in San Francisco, between 48th Avenue and Market Street. Project features and alternatives are described below.

2.1. Project Features

The project would involve the following features (common to all build alternatives):

2.1.1. Consolidated Bus Service

The build alternatives propose converting an existing mixed-traffic lane to a bus-only lane and would operate bus service in this lane in both the eastbound and westbound directions. The build alternatives would replace existing 38-Limited bus stops with BRT stations within the project limits (the “Geary corridor”), and implement other transit enhancements, such as increased bus service; deployment of specialized, branded bus vehicles; and distinctive branded BRT stations. For all build alternatives, permanent facilities and improvements would occur within the existing public right-of-way and no permanent acquisition of private property is anticipated.

2.1.2. Transit Improvements

Bus-only lanes: All build alternatives would result in the conversion of one mixed traffic lane in each direction to a bus-only lane in each direction between 34th Avenue and Market Street. The bus-only lane would be distinguished from mixed-traffic lanes by a physical barrier and/or colored pavement.

- **Bus service and enhanced operations:** The build alternatives would include BRT service instead of the current 38-Limited service. The new BRT service would have reduced headways (i.e., the time interval between the arrival of successive buses on the same line), and increased service span (i.e., longer hours of service).
- **Transit Signal Priority (TSB):** All build alternatives would include the installation of fiber-based TSP on all signalized intersections between 25th Avenue and Masonic Avenue. This type of TSP technology differs from the wireless TSP that would be installed under the No Build scenario.
- **BRT-branded vehicles with level boarding:** BRT service would be provided by vehicles similar to the new low-floor buses that are currently proposed for the Geary corridor. However, the vehicles would feature BRT “branding” markings to differentiate this different type of bus service.
- **Distinctive BRT stations:** All build alternatives would include high-quality stations with amenities to distinguish the BRT bus service.
- **Bus bulbs:** The BRT stations would feature bulb-outs. These pavement features are a physical extension of the sidewalk toward the travel lane that serve as a bus stop. Bus bulbs can improve transit performance by eliminating the need for buses to exit and reenter the flow of traffic at each stop.

2.1.3. Roadway and Multimodal Changes

- **Mixed-flow traffic and parallel parking:** Mixed-flow traffic would be reduced from three lanes to two lanes in each direction in the majority of the corridor. A lane of parallel on-street parking would generally be provided adjacent to the north and south sides of the Geary corridor. Diagonal parking between 25th Avenue and Park Presidio Boulevard would be replaced with parallel parking, providing enough space to create a bus-only lane in each direction.

- **Pavement rehabilitation and resurfacing:** Construction of the bus-only lanes would involve new colorization by grinding away the existing top layer of the street pavement and filling it with color in the pavement resurfacing mix, along with additional striping. Given municipal regulations that work on city streets must be done in five-year time blocks (i.e., once a street has been modified, it cannot be changed for the subsequent five years), the changes under the proposed project would be planned in coordination with other agencies that have planned projects in the corridor within the project's time frame. This would likely result in curb-to-curb rehabilitation and resurfacing within the Geary corridor, west of Van Ness Avenue.
- **Bicycle path between Masonic Avenue and Presidio Avenue:** In coordination with SFMTA's Masonic Street Design traffic-calming project, the proposed project would include a Class II bicycle path to be striped on Geary Boulevard between Masonic Avenue and Presidio Boulevard. The pathway on this block would be painted green and be set aside exclusively for bicycles.
- **Landscaping improvements:** The proposed project would include raised, landscaped medians from 48th Avenue to Gough Street. The alternatives, described briefly in the next section, vary in whether the existing median would remain or if it would be replaced by new medians.
- **Driveway and sidewalk modifications on O'Farrell Street near Van Ness Avenue:** A split stop is proposed on O'Farrell Street, where there would be two separate stops for the BRT bus service and the 38-Local bus service.

2.2. Project Alternatives

The following alternatives are currently being analyzed in the Environmental Impact Report/Environmental Impact Statement (EIR/EIS) for the project:

- Alternative 1: No Build Alternative
- Alternative 2: Side-Lane BRT
- Alternative 3: Center-Lane BRT with Right-Side Boarding and Dual Medians
- Alternative 3B: Center-Lane BRT with Right-Side Boarding, Dual Medians and Consolidated Bus Service

Certain project improvements, described above, would occur even if the project were not built, and are therefore included in the No Build Alternative. These include high quality buses with low floors, pavement rehabilitation, curb ramp upgrades, traffic signal infrastructure, real-time traffic management, TSP, pedestrian countdown signals, and accessible pedestrian signals.

The build alternatives propose similar improvements within the Geary corridor, but vary in design. The most significant variation is that in Alternative 2, the BRT lanes and platforms would be constructed on the outside edge of Geary Boulevard/Street, while in Alternatives 3 and 3B the BRT lanes and platform would be constructed in the roadway median. Under Alternatives 3 and 3B, the Fillmore Street underpass would be filled and part of an adjoining pump station would be demolished. Under Alternatives 2 and 3, the 38-Limited transit line

would be replaced by the BRT system, leaving the 38-Local service to operate as it does today, while Alternative 3B would consolidate both the 38-Limited and 38-Local lines into the BRT system.

3. HYDROGEOLOGIC SETTING

The Project study area extends approximately 6.5 miles across San Francisco, and has a range of hydrogeologic conditions. The western end of the study area has an elevation of approximately 200 feet above mean sea level (“msl”) (USGS, 1973) and is located approximately one-quarter mile east of the Pacific Ocean (Figure 1). The eastern end of the study area has an elevation of approximately 15 feet above msl (USGS, 1973) and is located approximately one-quarter mile southwest of San Francisco Bay (Figure 1). The topography in the Project study area north of Market Street is hilly, with a high elevation of 270 feet above msl near Masonic Avenue, and a low elevation of 25 feet above msl at Market Street. The topography south of Market Street is relatively flat with an elevation ranging from 15-25 feet above msl.

The eastern half of the Project study area is in the Downtown groundwater basin, and based on topography, surface and groundwater would be expected to flow to the east, toward San Francisco Bay. The western half of the Project study area is in the Lobos and Westside groundwater basins, and surface and groundwater in that part of the Study area would be expected to flow to the west, toward the Pacific Ocean. Depth to groundwater likely varies with the topography. Depth to groundwater at 3675 Geary Boulevard, near the center of the Project study area, is approximately 19 to 46 feet below ground surface “bgs”) (Conestoga-Rovers & Associates, 2013). Depth to groundwater at the Transbay Terminal, near the eastern end of the Project study area, is approximately 12 feet bgs (Shaw Environmental, 2008).

4. METHODOLOGY

4.1. Hazardous Material Site Identifications

Data sources related to historical land uses, current land uses, and environmental records from regulatory agencies were reviewed to identify known or potential sites associated with hazardous materials within one-eighth mile of the Project study area. These sites were then evaluated to identify known or potential releases of hazardous materials that could impact soils and/or groundwater beneath the Project construction areas.

Following the review of data sources and evaluation of hazardous materials release sites, the level of risk related to each site that could impact the Project, as well as other environmental concerns, was assessed and RECs were identified in accordance with the ASTM standard and Caltrans guidelines.

4.2. Other Environmental Concerns

Based on Caltrans guidelines and previous experience working on large transportation projects, other environmental concerns that could pose a risk to Project development were identified

and evaluated. These environmental concerns include aerially-deposited lead (“ADL”), historical fill materials, naturally-occurring asbestos, and lead and asbestos in structural materials.

5. CURRENT LAND USES

Current land uses at and adjacent to the Project site were determined by a site reconnaissance performed on 6 August 2013. The site reconnaissance was conducted to identify evidence of past or current use, storage, disposal, or releases of hazardous materials within the Project study area. Evidence of hazardous materials releases could include apparent odors, stained or discolored surfaces, and stressed or damaged vegetation. All observations were made from public rights-of-way.

No obvious evidence of hazardous materials releases was noted during the reconnaissance, but a total of 45 sites associated with possible hazardous materials use were identified during the reconnaissance. Photographs of these sites are included in Appendix B. These sites are identified in Table 1 and Figures 2A-2C and are described below in further detail.

- **Corrosive material storage area.** One currently-vacant storage area (Site 20 in Table 1) had a hazardous materials placard indicating the storage of corrosive materials.
- **Dry cleaners.** Seventeen clothing dry cleaner shops were identified in the study area (Table 1). These businesses often use and dispose of industrial solvents, primarily tetrachloroethylene, used for dry cleaning clothes.
- **Gasoline stations.** Seven gasoline stations were identified in the study area (Table 1). These sites typically store thousands of gallons of petroleum products in underground storage tanks (USTs).
- **Transportation facilities.** Two transit stations were identified in the study area (Sites 1 and 19 in Table 1). These sites may potentially include vehicle fueling and maintenance areas which could use, store, and dispose of fuels, lubricants, and other hazardous materials.
- **Vehicle repair shops.** Eighteen vehicle repair shops were identified in the study area (Table 1). These facilities typically use, store, and dispose of fuels, lubricants, solvents, and paints.

6. HISTORICAL LAND USES

Historical land uses in the Project study area were reviewed to assess potential sources of hazardous materials that could have affected soils and/or groundwater beneath the study area. In addition, the general uses of properties adjacent to the study area were identified to assess potential sources of contamination that could migrate beneath the study area.

Historical land uses in the Project vicinity were determined by reviewing historical aerial photographs from 1931, 1938, 1946, 1956, 1968, 1974, 1982, 1993, and 1998, which are included as Appendix C. Due to the size of the Project study area, only broad patterns of development were reviewed.

In 1931 and 1938, the dates of the first available aerial photographs, the entire Project study area was already densely developed. The western part of the Project study area was largely residential, with larger buildings between Divisadero and Market Streets, suggesting commercial uses. Land uses south of Market Street appeared largely industrial.

These land use patterns exhibited in the 1931 and 1938 aerial photographs were largely consistent with aerial photographs dated after 1938. Between 1956 and 1982, increasing commercial development was noted in the central part of the Project study area, between Presidio Boulevard and Van Ness Avenue, replacing smaller residential buildings.

The most significant land use changes occurred in the portion of the Project study area South of Market. During the 1950s, highway structures for the Embarcadero Freeway and San Francisco-Oakland Bay Bridge were constructed in this area. After 1974, industrial uses south of Market Street gradually changed to commercial and office uses. By 1993, the earthquake damaged Embarcadero Freeway had been removed north of Folsom Street, and additional office buildings were constructed in this area following the 1989 Loma Prieta earthquake.

7. REGULATORY AGENCY RECORDS

BASELINE contracted with Environmental Data Resources, Inc. (“EDR”), an environmental resource service, to conduct a preliminary search of federal, state, tribal, and local regulatory agency records pertaining to past and present hazardous materials use, storage, generation, disposal, and releases on properties at or near the Project study area. On 27 February 2013, an environmental records search was conducted by EDR using search distances that were equal to or greater than the minimum search distances presented in ASTM E1527-05 ranging up to one mile from the study area.

7.1. Methodology

The EDR database report identified more than 5,000 sites within one-eighth mile of the Project study area on lists and databases related to the use, storage, handling, disposal, or release of hazardous materials. The complete findings of the environmental records search and descriptions of the sources reviewed are documented in the EDR DataMap Environmental Atlas (EDR, 2013) included in Appendix D.

The entire database report was reviewed, and those lists indicating either significant hazardous material storage or disposal as well those sites with known or suspected hazardous materials releases were further evaluated to determine whether contamination from those sites would have the potential to affect the Project. These sites included:

7.1.1. Hazardous Materials Storage and Disposal

- **Aboveground and Underground Storage Tanks.** These sites, registered with the San Francisco Department of Public Health (“SFPDH”) Local Oversight Program (“LOP”), store hundreds or thousands of gallons of petroleum products.
- **Registered hazardous waste generators and handlers.** These sites are registered under the federal Resource Conservation and Recovery Act (“RCRA”) to generate or handle hazardous wastes. Only those sites with significant, on-going hazardous waste generation (generating more than 100 kilograms [“kg”] of hazardous waste or more than one kg of acutely hazardous waste per month) are required to register under RCRA.

7.1.2. Hazardous Material Release Sites

- **Federal Hazardous Materials Sites.** These sites are overseen by US Environmental Protection Agency (“US EPA”) and include National Priority List (“NPL”) sites, commonly referred to as Superfund sites, and Comprehensive Environmental Response, Compensation, and Liability Information System (“CERCLIS”) sites, which include sites evaluated by the for potential inclusion on the NPL.
- **State Hazardous Materials Sites.** These sites are listed on the State Department of Toxic Substances Control (“DTSC”) ENVIROSTOR database. ENVIROSTOR includes sites from a variety of State hazardous materials cleanup programs, as well as hazardous waste treatment facilities.
- **Leaking Underground Tank Sites.** These sites participate in the San Francisco Bay Regional Water Quality Control Board (“Regional Water Board”) leaking underground petroleum tank program, overseen locally by SFPDH LOP.
- **Spills, Leaks, Investigations, and Cleanup (“SLIC”) Sites.** These sites participate in the Regional Water Board SLIC program, which investigates and remediates groundwater contamination sites that are not associated with petroleum tanks.
- **Hazardous Materials Incident Sites.** These sites have reported a one-time release of hazardous materials, generally due to an accident or equipment failure.

These sites are shown in Tables 2 through 5, Figures 3 through 6, and are further described below. Site numbers in the text refer to Site identification numbers in the tables and figures.

7.2. Hazardous Materials Storage and Disposal

7.2.1. Underground and Aboveground Storage Tanks

The environmental database search identified 470 registered underground storage tank (“UST”) sites and 12 registered aboveground storage tank (“AST”) sites within one-eighth mile of the Project study area (Table 2 and Figures 3A-3C). Most USTs greater than 55 gallons in volume

require registration. AST sites do not need to be registered unless the AST sites have an aggregate storage of greater than 1,320 gallons. Many of these sites are listed as inactive, indicating that the storage tanks have been removed or were closed in-place.

7.2.2. Hazardous Waste Generators and Handlers

The environmental database search identified 147 RCRA-registered hazardous waste facilities within one-eighth mile of the Project study area (Table 3 and Figures 4A-C). 118 of these were small-quantity generators, registered to generate between 100 and 1,000 kg per month of non-acutely hazardous waste. Eighteen sites were large-quantity generators, registered to generate greater than 1,000 kg/month of hazardous waste, or more than one kg/month of acutely hazardous waste. Eleven sites were registered hazardous materials handlers or transporters, businesses that do not generate hazardous waste but may transport or temporarily store such wastes.

7.3. Federal Hazardous Materials Sites

No sites within one-eighth mile of the Project study area were listed on the US EPA NPL list, although one site was listed in the CERCLIS database (Table 4). CERCLIS is a federal program to investigate and remediate high-priority hazardous material sites, excluding those where only petroleum contamination is discovered. Depending on the preliminary findings of the investigations and potential health risks of the site, the sites may be elevated to the NPL list.

The CERCLIS site identified within the Project study area was Arabian American Oil Company, at 22 Battery Street (site CERCLIS-1 in Table 4 and Figure 5C). The site was screened under a DTSC program in 2000, but no further action was required. As no releases from this site have been identified, it would not be expected to affect soil or groundwater within the Project study area.

7.4. State Hazardous Materials Sites

Two sites were identified on the State ENVIROSTOR database within one mile of the Project study area (Table 4). Online files regarding the active hazardous material cleanup sites were reviewed to determine the potential for releases to affect soil or groundwater within the Project study area (DTSC, 2013). Details regarding that review are provided below.

The California Oak Cleaners site (DTSC-1 in Table 4 and Figure 6A) was evaluated by DTSC due to the detection of trace concentrations of solvents in shallow soil samples. The site is closed, with no further action proposed by DTSC.

At the 199 Fremont Street site (DTSC-2 in Table 4 and Figure 5C), soils proposed to be disturbed for a redevelopment project were found to be contaminated with lead and solvents. In 1998, DTSC performed technical review on a health risk assessment and a site mitigation plan for the site. Contaminants in fill materials are a concern at many sites south of Market Street; this topic is discussed further below under Section 8.2.

Based on available information, the reported contaminant releases at the State hazardous materials sites would not be likely to affect soils or groundwater at the Project study area, though contaminants from historical fill material may be a concern in portions of the study area south of Market Street.

7.5. Leaking Underground Storage Tanks

The environmental database report identified 188 sites within one-eighth mile of the Project study area with releases from leaking underground petroleum storage tanks (Table 5 and Figure 6A-C). All but two of those sites have been closed, indicating that remediation was completed or was not necessary. Online files for the two active sites were reviewed using the Geotracker database (Regional Water Board, 2013).

A release of gasoline was reported at the Chevron Station 9-0535 site at 3675 Geary Boulevard (LUST-3 in Table 5 and Figure 6B). The release was discovered in January 1987 when all existing USTs and product piping were removed and replaced. Groundwater monitoring has been performed since that time. During three months from November 2009 to January 2010, groundwater batch extraction was used to remediate the site. Approximately 4,900 gallons of groundwater were extracted from the wells, which appear to have reduced the concentrations of Total Petroleum Hydrocarbons (TPH) as gasoline and benzene in groundwater (Conestoga-Rovers & Associates, 2010). Monitoring is ongoing to evaluate the effectiveness of the remedial action. The most recent groundwater monitoring event, from March 2013, identified concentrations of TPH as gasoline at up to 41 mg/L and benzene at up to 13 mg/L, which were significantly elevated over the concentrations reported immediately after the remedial action (Conestoga-Rover & Associates, 2013). This suggests that additional remedial action may be required at this site. Groundwater from this site is flowing toward the northwest, toward the adjacent intersection of Geary Boulevard and Arguello Boulevard and contaminants from this site may have migrated with the groundwater and affected subsurface conditions at the Project study area.

A release of diesel was reported at the World Communications, Inc. site at 450 Mission Street (Site LUST-173 in Table 5 and Figure 6D) in January 2013. A 2,000-gallon UST was removed from the site at this time, and although it was located in a concrete and brick vault, oily groundwater was discovered during the removal. After the oily water was removed, additional oily groundwater re-entered the vault. The oily water contained 11 mg/L of TPH as diesel and 13 mg/L of TPH as motor oil (SFDPH, 2013). The source of the contamination is not yet known. In April 2013, SFDPH LOP submitted a letter requesting an environmental investigation be performed at the site. No groundwater flow direction has been determined, so it is not known if contaminated groundwater at this site may have migrated and affected subsurface conditions in the Project study area.

7.6. Spills, Leaks, Investigations, and Cleanup (“SLIC”) Sites

The environmental database review identified four sites within one-eighth mile of the Project study area in the SLIC program (Table 4). The SLIC program includes sites with known or

suspected groundwater contamination that is not associated with a leaking underground storage tank.

The four SLIC sites include one that has been closed, and two that have been listed as inactive for more than ten years (Table 4). Online files for the remaining active site were reviewed using the Geotracker database (Regional Water Board, 2013).

Tetrachloroethylene (PCE) and related compounds have been identified in groundwater beneath the Kaiser Project site, located at 2130 O'Farrell Street (Table 4 and Figure 5B). This is believed to be a result of dry-cleaning operations conducted at the site from 1929 until 1951 (AMEC, 2008). The release was discovered in 1987, and interim groundwater extraction and treatment began in 1988. When a new parking structure was constructed at this location in 1991, a new groundwater extraction and monitoring system was installed.

Between 1991 and 2008, over 56 million gallons of groundwater have been extracted from the site, and approximately 70 pounds of PCE were removed (AMEC, 2008). Groundwater continues to be extracted from the site at a rate of 0.2 gallons per minute (Haley & Aldrich, 2013). The most recent groundwater monitoring event, in February 2013, identified PCE in groundwater at the site at concentrations of up to 0.56 mg/L, above the California Maximum Contaminant Level ("MCL") of 0.005 mg/L (Haley & Aldrich, 2013). MCLs are drinking water standards, which are used as the cleanup goals at this site, as the groundwater is a potential drinking water source.

Groundwater at this site generally flows toward the east (Haley & Aldrich, 2013), making it hydraulically cross-gradient from the Project study area. However, as this site is located adjacent to Geary Boulevard, there may be a potential for contaminants to have migrated from this site and affected subsurface conditions at the Project study area.

7.7. Hazardous Materials Incidents

A total of 48 sites at or near the alignment appear on the California Hazardous Materials Incident Reporting System (CHMIRS) and/or the federal Emergency Response Notification System (ERNS) (Table 4 and Figures 5A-5C). Each of these sites involved a hazardous material spill reported to emergency response teams as a result of an accident or equipment failure. As noted in Table 4, most of these incidents involve small quantities of hazardous materials that were noticed and cleaned up immediately after reporting. As none of the releases resulted in follow-up investigation or regulatory oversight, according to information from the environmental database report, it is unlikely that the spills at these sites would significantly affect soil or groundwater in the Project study area.

8. OTHER ENVIRONMENTAL CONCERNS

The following discussions are about sources of potential hazardous materials that could pose an environmental risk to the Project, but are considered outside the standard scope of ASTM E1527 05 (i.e., do not necessarily meet the definition of a REC).

8.1. Aerially-Deposited Lead

Lead alkyl compounds were first added to gasoline in the 1920s. Beginning in 1973, the United States Environmental Protection Agency ordered a gradual phase out of lead from gasoline that significantly reduced the prevalence of leaded gasoline by the mid-1980s. Prior to the 1970s, the EPA estimated that vehicles emitted approximately 75 percent of the lead consumed in leaded gasoline as particulate matter in the exhaust (DTSC, 2004). As a result, shallow soils within approximately 30 feet of the edge of pavement in roadway corridors have the potential to be contaminated with ADL from historical car emissions prior to the elimination of lead in gasoline (DTSC, 2009).

Based on a review of historical aerial photographs, Geary Boulevard has been a major roadway since at least 1931, long before the phase-out of lead in gasoline. Therefore, exposed shallow soils at the Project study area within approximately 30 feet of the edge of current or historical paved areas could be contaminated with ADL.

8.2. Historical Fill Material/Maher Ordinance

Much of the area near the eastern San Francisco waterfront was filled during the late 1800s and early 1900s with material of unknown origin. Some of this fill material has been found to contain elevated concentrations of contaminants such as metals and polynuclear aromatic hydrocarbons. The eastern portion of the Project study area (south of Market Street, on Main, Beale, Fremont, and Folsom streets) falls within the jurisdiction of Article 22A of the San Francisco Health Code, which is administered by SFDPH (also referred to as the Maher Ordinance). The Maher Ordinance applies to all projects that result in the excavation of more than 50 cubic yards of soil located bayward of historic high tide lines (i.e., on land that has been filled) for which a building permit is required.

The Project does not propose any excavation in the Article 22A area, but if this were to change, the Maher Ordinance would require the preparation of a site history report for the project site, soil sampling and analysis, a soil analysis report, a site mitigation report (if needed), and certification that the measures recommended in the site mitigation report were implemented.

8.3. Lead-Based Paint and Asbestos in Structures

Structures in the Project study area that may be affected by the Project, such as bus shelters and the Fillmore Street pump station, may be coated with lead-based paint and/or asbestos-containing materials. Although the use of lead paint and asbestos-containing materials in the United States began to be phased out in the 1970s and 1980s, they continue to be used for specialized uses, such as lead chromate used in traffic paints and asbestos fibers used to strengthen specialized concrete components. Lead and asbestos are state-recognized carcinogens, and lead is a reproductive toxicant (California Environmental Protection Agency, 2012). Demolition or renovation of structures containing lead-based paint and/or asbestos-containing materials could pose a risk of releasing lead particles and asbestos fibers into the environment.

8.4. Naturally-Occurring Asbestos

Geologic mapping from the United States Geological Survey (“USGS”) shows that serpentinite bedrock underlies a portion of the Project study area between Masonic Avenue to the west and Brockerick Street to the East (USGS, 2013). Serpentinite is a metamorphic rock that often contains naturally-occurring asbestos. Therefore, excavation in this area that disturbs this material could encounter asbestos, creating a potential public health hazard during development of the Project and requiring special soil management and disposal procedures.

8.5. Yellow Traffic Striping and Pavement Markings

Lead and hexavalent chromium have been used in yellow thermoplastic and yellow paint for traffic striping and pavement marking for many years and as recently as 2004 (Caltrans, 2006). The residue that may be produced from the yellow thermoplastic and yellow paint during road improvement activities may contain lead and hexavalent chromium concentrations that could produce toxic fumes when heated. The debris produced during the removal of yellow thermoplastic and yellow paint may need to be disposed of as a California and/or federal hazardous waste if the concentrations of lead or hexavalent chromium exceed hazardous waste thresholds.

9. DATA GAPS

The ASTM E1527-05 requires the identification of data gaps, along with actions taken to address these gaps, and an opinion as to whether these gaps are significant. A data gap may result from a lack of or inability to obtain information during any of the activities required by ASTM E1527 05, including, but not limited to the review of historical land use information and regulatory agency records, site reconnaissance, or interviews. In particular, review of reasonably ascertainable historical land use information from the first developed land use to the present that does not provide sufficient detail to assess potential land use changes at five year intervals may be considered a data gap.

Several data gaps were identified during the review of historical land use records due to the time intervals between records exceeding ten years (Appendix C). The data gaps are not considered significant because land uses were reasonably consistent between each data gap. No other data gaps were identified during this ISA.

10. ASTM E1527-05 DEVIATIONS

The purpose of this ISA was not to qualify for landowner liability protections associated with commercial real estate transactions under the Comprehensive Environmental Response, Compensation, and Liability Act (“CERCLA”). As a result, the following deviations from ASTM E1527-05, which are intended to meet or exceed the federal requirements for landowner liability protections under CERCLA, do not have a significant effect on the findings or conclusions of this ISA:

- The Project study area is not a single contiguous commercial parcel, as assumed in ASTM E1527-05, and therefore a title search to identify potential environmental liens and activity and use limitations associated with commercial parcels was not conducted.
- Interviews with past, present, and prospective owners or operators who are likely to have material information regarding the potential for contamination at the Project study area were not conducted, because such were not reasonably available due to the large number of parcels in the Study area.
- Interviews with state or local regulatory officials regarding the potential for contamination in the Project study area and vicinity were not conducted, because any information obtained would likely duplicate information already reviewed from federal, state, and local regulatory agency records.

11. FINDINGS

In accordance with ASTM E1527-05, the review of available data resources and evaluation of hazardous materials release sites has identified known or potential sources of hazardous materials releases that could impact soils and/or groundwater beneath the Project study area that would qualify as a REC:

- **Reported Hazardous Materials Releases**
Three reported releases of hazardous materials, at 3675 Geary Boulevard, 450 Mission Street, and 2130 O'Farrell Street, have affected groundwater at/or near the Project study area.

This ISA has also identified the following environmental concerns associated with hazardous materials, hazardous waste, and/or contamination at the Project study area that are considered outside the standard scope of ASTM E1527-05, but which have the potential to affect the proposed Project:

- **Aerially-Deposited Lead**
Exposed shallow soils in the Project study area within approximately 30 feet of the edge of paved areas could be contaminated with ADL from historical vehicle emissions.
- **Historical Fill Materials**
Should excavation be proposed in the portion of the Project study area south of Market Street, contaminants from fill materials may be encountered. The Project would also be required to comply with investigation and mitigation requirements of the Maher Ordinance.
- **Lead-Based Paint and Asbestos-Containing Materials**
Bus shelters, a pump station, and other structures may be coated with lead-based paint and/or asbestos-containing materials that, if Project development were to disturb them,

could pose a risk to human health and the environment during Project demolition and renovation activities.

- Naturally-occurring asbestos

Bedrock underlying a portion of the Project study area consists of serpentinite, which may contain naturally-occurring asbestos. Disturbance of this material could result in a public health hazard and/or require special management and disposal procedures.

- Yellow Traffic Stripe and Pavement Markers

Existing yellow thermoplastic and yellow paint striping and markings on roadways at the Project study area may contain elevated concentrations of lead and hexavalent chromium, which could result in human exposures during restriping activities.

12. CONCLUSIONS

12.1. Recognized Environmental Conditions

We have performed this ISA in conformance with the scope and limitations of ASTM E1527-05 for the Project study area. Any exceptions to, or deletions from, this practice are described in Section 10 of this report. This assessment has revealed three RECs in connection with the Project study area: reported hazardous materials releases at 3675 Geary Boulevard, 450 Mission Street, and 2130 O'Farrell Street.

12.2. Other Environmental Conditions

This assessment has also identified environmental concerns at the Project study area that are considered outside the standard scope of ASTM E1527 05. In accordance with the Caltrans Environmental Handbook, this assessment has identified the following risk levels associated with known or suspected hazardous materials, hazardous waste, and/or contamination at the Project study area that could potentially affect proposed construction activities and/or operations:

- ADL in exposed shallow soils adjacent to roadways from historical vehicle emissions
- Contaminants from historical fill material in the western portion of the Project study area
- Lead-based paint and asbestos-containing materials on existing buildings and structures
- Naturally-occurring asbestos from serpentinite bedrock
- Lead and hexavalent chromium in existing yellow traffic stripe and pavement marking

12.3. Risk Analysis

Based on guidance in the Caltrans Environmental Handbook, this assessment has identified the following risk levels associated with hazardous materials, hazardous waste, and/or

contamination within the Project study area. These risks could affect the cost, scope, and/or schedule of proposed Project construction activities and/or operations.

- Reported hazardous materials releases – Medium Risk
- Aerially-deposited lead in soil – Medium Risk
- Contaminants in historic fill materials – Low Risk
- Naturally-occurring asbestos from bedrock – Medium Risk
- Lead-based paint and asbestos-containing materials on structures – Low Risk
- Lead and hexavalent chromium in yellow thermoplastic and yellow paint striping and markings on roadways – Low Risk

13. RECOMMENDATIONS

13.1. Preliminary Site Investigation

Prior to construction, a limited Preliminary Site Investigation should be performed to investigate hazardous materials concerns related to soil, groundwater, and construction materials in the Project study area, as identified in this ISA. Only those areas where soils will be disturbed during construction, such as for sign foundations and excavation for communication and power utilities, should be sampled.

Soil samples should be tested for contaminants specific to the hazardous materials concerns identified in that location. For example, aerially-deposited lead is a potential concern throughout the Project study area, while naturally-occurring asbestos is potentially present in only a small portion of the study area. Accordingly, samples in all areas should be analyzed for total and soluble lead, while only samples from excavation areas overlying serpentinite bedrock should be analyzed for asbestos.

Additional investigation may be required to fully evaluate potential hazardous materials issues if concerns are identified during the Preliminary Site Investigation. All environmental investigations at the Project should be provided to project contractors, so the findings may be incorporated into their Health and Safety and Hazard Communication Programs.

Soil Investigation. The general areas and contaminants of concern for investigating soils are summarized below.

Soil samples should be collected in the areas of concern summarized below in areas where Project construction activities will disturb the soils. Soil analytical results should be screened against the Regional Water Board's Environmental Screening Levels ("ESLs") and other applicable risk-based standards to determine appropriate actions to ensure the protection of

construction workers, future site users, and the environment and also be screened against state and federal hazardous waste thresholds to determine soil management options.

- **Aerially-Deposited Lead**

Representative samples of exposed shallow soils should be collected within 30 feet of the edge of the roadway and analyzed for total lead and soluble lead.

- **Naturally-occurring Asbestos**

Representative samples of soils should be collected from Project construction areas in areas where serpentinite bedrock is present.

Groundwater Investigation. Groundwater should be collected in areas near reported hazardous materials release sites and analyzed for TPH and volatile organic compounds if project excavations were to extend into the groundwater in those area. Hazardous materials releases sites that have affected groundwater near the Project study area are located at 3675 Geary Boulevard, 450 Mission Street, and 2130 O'Farrell Street.

Additional hazardous materials releases may occur or be discovered in the future. In accordance with ASTM E1527-05 guidance, the findings of this ISA are only presumed to be valid for 180 days after completion. Therefore, an updated review of regulatory agency records should be conducted prior to the groundwater investigation, to ensure that groundwater that will be encountered during construction is properly investigated.

Hazardous Building Materials Survey. Traffic paints and structures that will be modified or demolished should be sampled and analyzed as part of a Hazardous Building Materials Survey.

13.2. Hazardous Materials Management and Disposal

Based on the findings and recommendations of the Preliminary Site Investigation, the Project may need to implement special soil, groundwater, and construction materials management and disposal procedures for hazardous materials, as well as construction worker health and safety measures during construction. In addition to the findings and recommendations of the Preliminary Site Investigation, the following measures should be implemented during the Project.

- Groundwater from dewatering of excavations, if any, should be stored in Baker tank(s) during construction activities and the water should be characterized prior to disposal or recycling.
- A construction risk management plan should be implemented by contractors with procedures for identifying and mitigating potentially unreported releases of hazardous materials.

15. LIMITATIONS

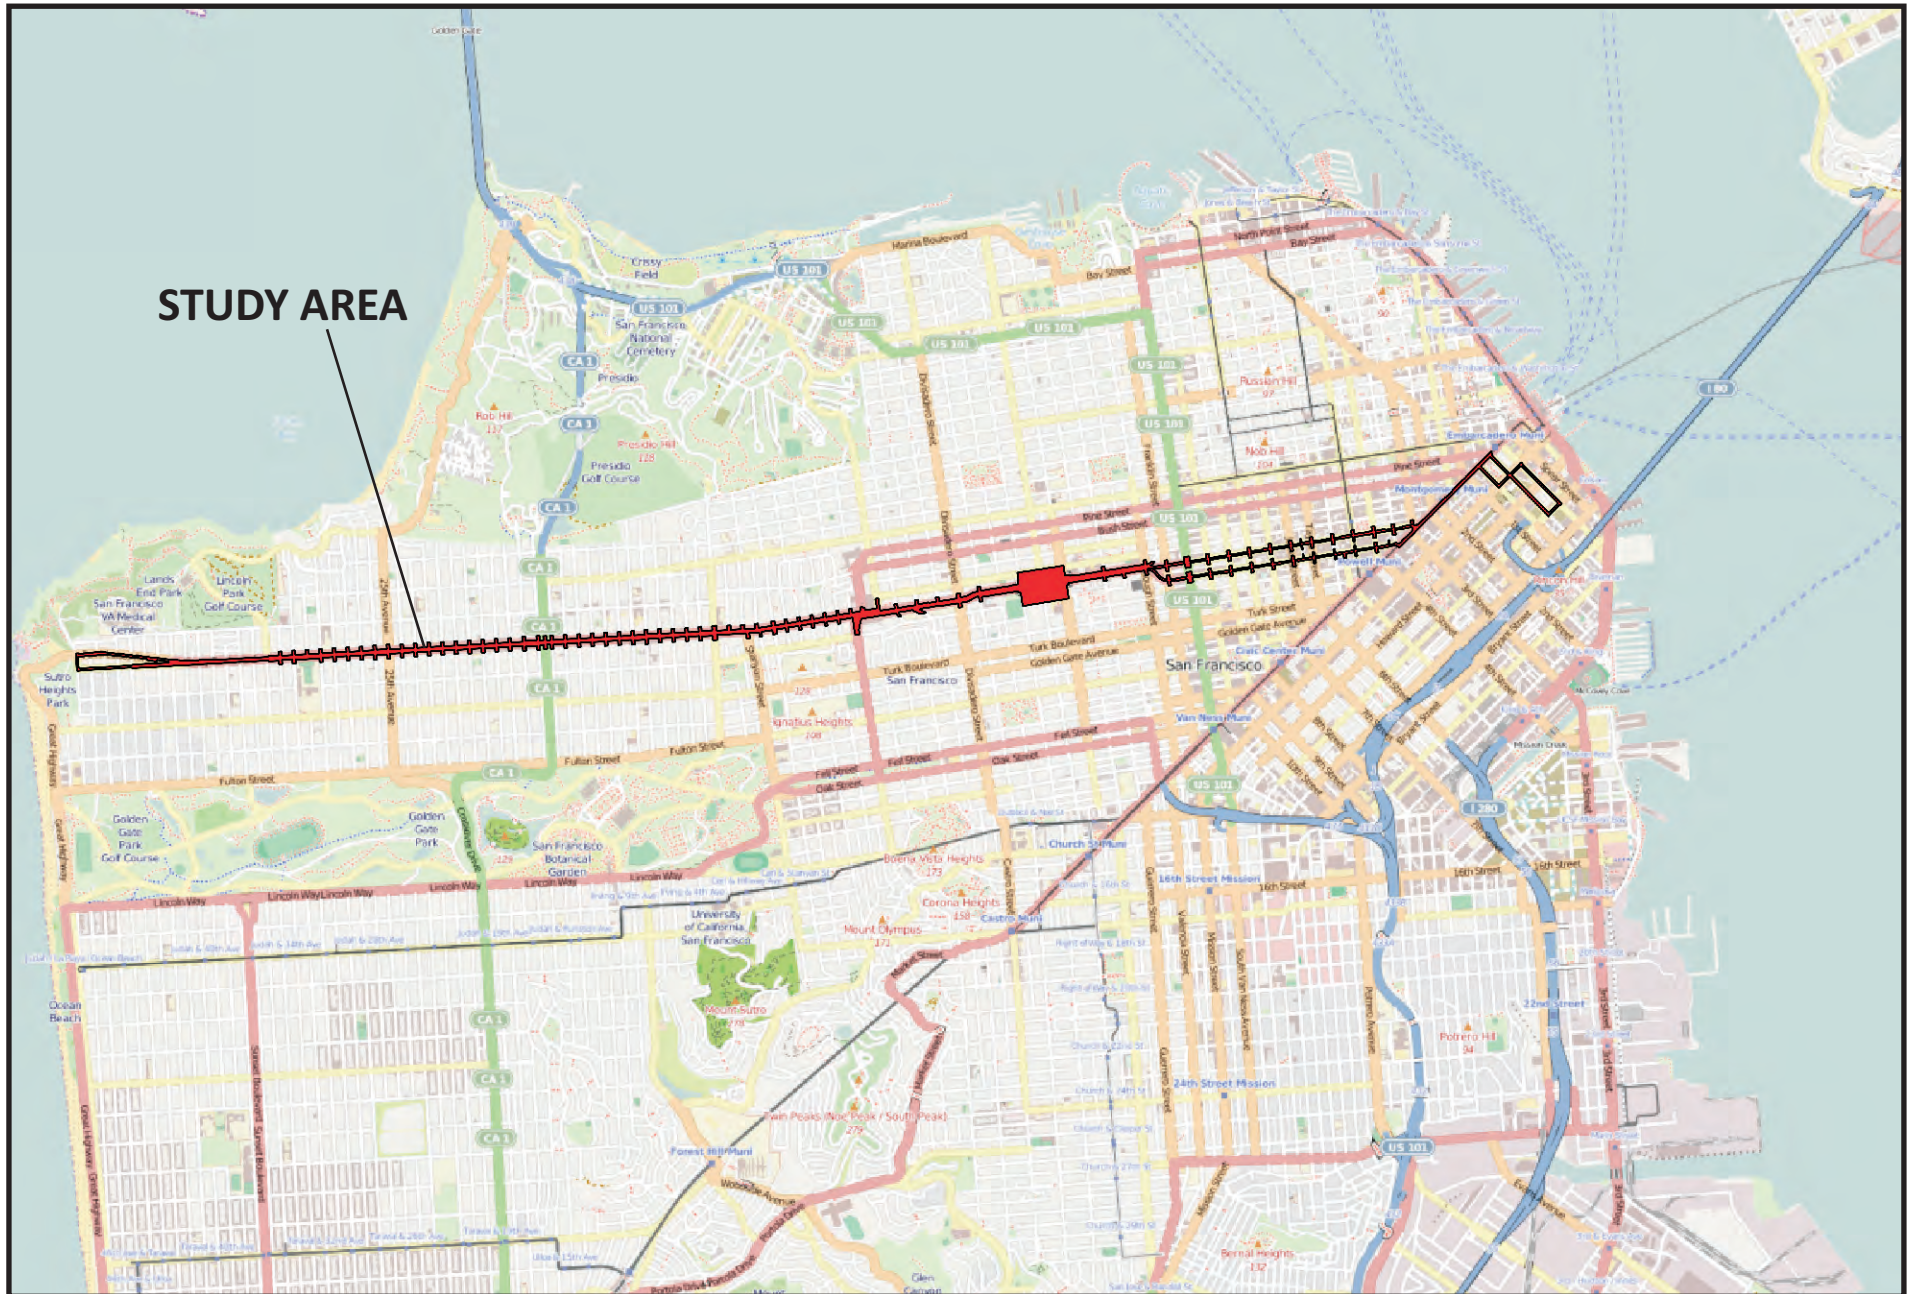

This ISA was performed to provide an understanding of the current environmental conditions at the Project study area. BASELINE's interpretations and conclusions regarding this information and presented in this report are based on the expertise and experience of BASELINE in conducting similar assessments and current local, state, and federal regulations and standards.

BASELINE's objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental, and engineering consulting professionals, in accordance with the standard for professional services for a consulting firm at the time these services were provided. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, BASELINE cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the Site, analysis of the data, and re-evaluation of the findings, observations, conclusions, and recommendations expressed in this report.

The findings, observations, conclusions, and recommendations expressed by BASELINE in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the Site with any federal, state, or local law or regulation. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

TABLE 4: NON-UST HAZARDOUS MATERIAL RELEASE SITES WITHIN ONE-EIGHTH MILE FROM PROJECT STUDY AREA			
Geary Corridor Bus Rapid Transit Project, San Francisco			
SITE NUMBER	SITE NAME	SITE ADDRESS	SITE STATUS
Federal Hazardous Material Release Sites			
CERCLIS-1	Public Transportation Dept	22 Battery Street	Screening performed in 2000. No further action required.
State Hazardous Materials Release Sites			
DTSC-1	California Oak Cleaners	4723 Geary Blvd	Site evaluated by DTSC due to the detection of trace concentrations of solvents in shallow soil samples. No further action proposed by DTSC, who referred the site to local agency in 2000.
DTSC-2	199 Fremont Property	199 Fremont Street	Soils proposed to be disturbed for a redevelopment project were found to be contaminated with lead and solvents. In 1998, DTSC performed technical review on a health risk assessment and a site mitigation plan for the site.
Spills, Leaks, Investigations, and Countermeasures Sites			
SLIC-1	Major Paint & Varnish Company	3 Masonic Ave	Leak of stoddard solvents/mineral spirits/distillates reported in 1985. Site has been inactive since 2001.
SLIC-2	Kaiser Project	2130 O'Farrell Street	Solvent contamination, believed to be from former laundry in building basement, has affected groundwater. Groundwater monitoring and treatment has been ongoing since 1991.
SLIC-3	Shorenstein Company	1 California St	Release of solvents reported in 1994. Case closed in April 2006.
SLIC-4	Continental Construction	301 Howard St	Inactive SLIC case. Site has been inactive since 2002. No details available in SWRCB online records.
Emergency Response Notification System Hazardous Materials Incidents			
ERNS-1	539 45Th Ave (Torgier Kateraas)	539 45Th Ave (Torgier Kateraas)	One cubic yard of oil-contaminated sand discovered in 1992. Material cleaned up by contractor.
ERNS-2	3675 Geary Blvd-Diagnostic Ctr	3675 Geary Blvd-Diagnostic Ctr	Release of several gallons of antifreeze reported in 1991. Storm drain affected. City notified.
ERNS-3	Herrera Buick/3700 Geary Blvd.	Herrera Buick/3700 Geary Blvd.	Release of 2 gallons of solvent reported in 1987. Cleanup performed by site owner.
ERNS-4	136 Collins	136 Collins	Release of small quantity of thinner reported in 1992. Release reported to City.
ERNS-5	2190 Geary Blvd.	2190 Geary Blvd.	Release of 25 gallons of perchloroethylene reported in 1990. Release contained and cleaned up with City supervision.
ERNS-6	760 Ellis St	760 Ellis St	Release of 1 gallon of PCB-containing transformer fluid reported in 2002. Cleanup performed by PG&E.
ERNS-7	666 Ellis St #306	666 Ellis St #306	Release of unknown fumes reported in 2002. Fire department notified. No cleanup required.
ERNS-8	642 O'Farrell St	642 O'Farrell St	Release of refrigerant gases due to equipment failure reported in 1992. No cleanup required.

TABLE 4: NON-UST HAZARDOUS MATERIAL RELEASE SITES WITHIN ONE-EIGHTH MILE FROM PROJECT STUDY AREA Geary Corridor Bus Rapid Transit Project, San Francisco			
SITE NUMBER	SITE NAME	SITE ADDRESS	SITE STATUS
ERNS-9	645 Leavenworth St.	645 Leavenworth St.	Release of 5 gallons of sulfur dioxide reported in 1991 due to an equipment leak. Release dissipated to air and no cleanup was required.
ERNS-10	333 O'Farrel St.	333 O'Farrel St.	Release of chlorine gas reported in 1990 due to improper mixing of chemicals. Gas dissipated in an hour and no cleanup was required.
ERNS-11	222 Mason Street	222 Mason Street	Release of refrigerant gases due to equipment failure reported in 2012. No cleanup required.
ERNS-12	520 Powell St	520 Powell St	Release of 1 gallon of muriatic acid reported in 1992. Cleanup performed by SFDPPW.
ERNS-13	166 Geary	166 Geary	Exhaust fumes from an idling truck reported in 1987. Building ventilated.
ERNS-14	1 Yerba Buena Rd	1 Yerba Buena Rd	Release of oily bilge water reported in 1998. Release cleaned up by coast guard. Separate release of one quart of diesel reported in 2006. No cleanup required due to small size of release.
ERNS-15	604 Mission St	604 Mission St	Release of asbestos reported in 1991 due to a fire. Asbestos was cleaned up by Fire Department.
ERNS-16	50 Beal St(Manhole)	50 Beal St(Manhole)	Release of green liquid from manhole reported in 1987. City investigated and did not identify any hazardous substances.
ERNS-17	77 Beale St	77 Beale St	Release of natural gas reported in 2012. System shut down and PG&E notified.
ERNS-18	Nw Corner Of Beale & Howard Int	Nw Corner Of Beale & Howard Int	Release of hydraulic fluid from a leaking truck reported in 1988. City notified.
ERNS-19	180 Howard St	180 Howard St	Release of palm oil to San Francisco Bay reported in 2000. No cleanup required.
California Hazardous Materials Incident Reporting System Sites			
CHMIRS-1	VA Medical Center	VA Medical Center	Hazardous materials incident reported in 1991. No details available in environmental database report. Separate release of medical chemical reported in 2000 when cooling packs failed, allowing the chemical, Unicryn 1866, to outgas. Cleanup conducted by responsible party.
CHMIRS-2	3132 Clement Street	3132 Clement Street	Hazardous materials incident reported in 1989. No details available in environmental database report.
CHMIRS-3	520 26Th Ave.	520 26Th Ave.	Release of palm oil to San Francisco Bay reported in 2000. No cleanup required.
CHMIRS-4	4733 Geary Blvd	4733 Geary Blvd	Release of 1 gallon of mineral oil from a transformer reported in 2001. SFDPPH responded to incident.
CHMIRS-5	389 9th Ave	389 9th Ave	Release of sulfur dioxide vapor reported in 1996 due to equipment failure. No cleanup required.

**TABLE 4: NON-UST HAZARDOUS MATERIAL RELEASE SITES WITHIN ONE-EIGHTH MILE FROM PROJECT STUDY AREA
Geary Corridor Bus Rapid Transit Project, San Francisco**

SITE NUMBER	SITE NAME	SITE ADDRESS	SITE STATUS
CHMIRS-6	3675 Geary Blvd	3675 Geary Blvd	Release of 3 quarts of latex paint reported in 2007. One quart released to storm drain before release contained and cleaned up.
CHMIRS-7	#5459 3501 Geary Blvd	#5459 3501 Geary Blvd	Release of approximately one quarter of diesel reported in 2010, and a separate release of 2 gallons of diesel reported in 2011. Both releases cleaned up by responsible party.
CHMIRS-8	1459 Broderick Apartment Bldg	1459 Broderick Apartment Bldg	Release of gasoline reported in 1995 due to equipment failure. Equipment repair performed by responsible party.
CHMIRS-9	1600 Divisadero St.	1600 Divisadero St.	Suspicion of asbestos reported in 1994 during roofing material removal. No cleanup action noted.
CHMIRS-10	999 Van Ness	999 Van Ness	Release of 75 gallons of mineral oil from a failed transformer reported in 2008. Cleanup performed by PG&E.
CHMIRS-11	Geary and Polk	Geary and Polk	Release of 1 gallon of diesel fuel reported in 2003 from leaking vehicle. No cleanup reported.
CHMIRS-12	Commercial Building	Commercial Building	Suspected release of gasoline reported in 2001 when a vapor alarm was triggered. No evidence of release was identified after investigation.
CHMIRS-13	1062 Sutter Street	1062 Sutter Street	Release of 31 gallons of abandoned hazardous waste reported in 1994. Cleanup performed by SFDPH.
CHMIRS-14	San Francisco Marine Fuel Dock 295 Hyde Street	San Francisco Marine Fuel Dock 295 Hyde Street	Release of 100 gallons of diesel from a portable generator reported in 2012. Spill was contained in a berm around the generator.
CHMIRS-15	In Front Of 345 Leavenworth St.	In Front Of 345 Leavenworth St.	Release of less than one gallon of diesel reported during refuelling incident. Fuel dissipated and no cleanup required.
CHMIRS-16	Avis Rent A Car	Avis Rent A Car	Release of one cubic foot of sulfur dioxide reported in 2001. No cleanup required.
CHMIRS-17	199 Eddy Street	199 Eddy Street	Report of noxious fumes in 1995. No source identified during subsequent investigation.
CHMIRS-18	253 Post Street	253 Post Street	Release of 400 gallons of diesel reported in 2011 when fuel delivery was pumped into a sewer clean out. SFPUC determined no cleanup was possible or necessary.
CHMIRS-19	4Th Floor Roof 55 4Th St	4Th Floor Roof 55 4Th St	Release of 0.5 gallon of chemical due to damage in transport. Chemical, n butyl aromatic diamine, cleaned up by SFDPH.
CHMIRS-20	49 Geary St	49 Geary St	Release of 500 gallons of diesel fuel to storm drain reported in 1995 due to equipment failure. No cleanup attempted, as release was not discovered in time.
CHMIRS-21	Ifo 560 Market St.	Ifo 560 Market St.	Suspected hazardous materials release reported in 1999 due to material leaking from an envelope. No cleanup required.

TABLE 4: NON-UST HAZARDOUS MATERIAL RELEASE SITES WITHIN ONE-EIGHTH MILE FROM PROJECT STUDY AREA Geary Corridor Bus Rapid Transit Project, San Francisco			
SITE NUMBER	SITE NAME	SITE ADDRESS	SITE STATUS
CHMIRS-22	544 Market Street	544 Market Street	Release of 50 gallons of diesel reported in 2005 during a vehicle accident. Cleanup performed by contractor.
CHMIRS-23	101 California St.	101 California St.	Hazardous materials incident reported in 1997 when dead body discovered during asbestos removal project.
CHMIRS-24	50 California St Bldg	50 California St Bldg	Hazardous materials incident reported in 2001 due to vapor created by improper mixing of chemicals. Cleanup performed by responsible party.
CHMIRS-25	425 Mission St At Transbay Transit Terminal Bus Station	425 Mission St At Transbay Transit Terminal Bus Station	Release of asbestos reported in 1994 due to a fire. Asbestos was cleaned up by abatement contractor.
CHMIRS-26	135 Main St.	135 Main St.	Release of 6 gallons of muriatic acid reported in 1994. Release cleaned up by contractor.
CHMIRS-27	335 Powell Street	335 Powell Street	Theft of radiologic iodine capsule reported in 2006 when materials from vehicle trunk stolen. No cleanup possible.
CHMIRS-28	88 Kearny Street	88 Kearny Street	Hazardous materials incident reported in 1989. No details available in environmental database report.
CHMIRS-29	255 California St	255 California St	Release of 10 gallons of diesel reported in 2012 due to generator equipment failure. Release cleaned up by contractor.

APPENDICES

(PDF ON CD-ROM)

- A: ISA CHECKLIST**
- B: PHOTOGRAPHS FROM SITE RECONNAISSANCE**
- C: HISTORICAL AERIAL PHOTOGRAPHS**
- D: ENVIRONMENTAL DATABASE REPORT**
- E: QUALIFICATIONS OF PREPARERS**

Initial Site Assessment (ISA) Checklist

Project Information

County San Francisco, Route Geary Blvd/Street

Description: **The Project will install a bus rapid transit system in the Geary Corridor.**

Project Manager Irene Avetyan, JACOBS phone # (510) 457-0027

Project Engineer Cris Subrizi, MSA Design phone # (415) 609-2067

Project Screening

Attach the project location map to this checklist to show location of all known and/or potential HW sites identified. **See Figures 3-6 of the ISA report**

1. Project Features: New R/W? **No** Excavation? **Yes** Railroad Involvement? **No**
Structure demolition/modification? **No** Subsurface utility relocation? **No**
2. Project Setting: **Urban roadway**
Rural or Urban: **Urban**
Current land uses: **Urban roadway**
Adjacent land uses: **Residential and commercial**
3. Check federal, State, and local environmental and health regulatory agency records as necessary, to see if any known hazardous waste site is in or near the project area. If a known site is identified, show its location on the attached map and attach additional sheets, as needed, to provide pertinent information for the proposed project. **See Tables 2-5, Figures 3-6, and the discussion in section 7 of the ISA report.**
4. Conduct Field Inspection. Date: **7 March 2013; See discussion in section 5, Table 1, and Appendix B of the ISA report.**

STORAGE STRUCTURES / PIPELINES:

Underground tanks <u>None</u>	Surface tanks <u>None</u>
Sumps <u>None</u>	Ponds <u>None</u>
Drums <u>None</u>	Basins <u>None</u>
Transformers <u>None</u>	Landfill <u>None</u>
Other <u>N/A</u>	

(continued)

Initial Site Assessment (ISA) Checklist

CONTAMINATION: (spills, leaks, illegal dumping, etc.)

Surface staining None

Oil sheen None

Odors None

Vegetation damage None

Other None

HAZARDOUS MATERIALS: (asbestos, lead, etc.)

Buildings None

Spray-on fireproofing None

Pipe wrap None

Friable tile None

Acoustical plaster None

Serpentine Yes – see section 8.4 of ISA for details

Paint Traffic striping

Other None

5. Additional record search, as necessary, of subsequent land uses that could have resulted in a hazardous waste site. Potential contamination may be present on the Project site from three reported release sites, aerially-deposited lead, and naturally-occurring asbestos. See findings reported in section 11 of the ISA report.
6. Other comments and/or observations: Refer to Executive Summary of the ISA report.

ISA Determination

Does the project have potential hazardous waste involvement? Yes If there is known or potential hazardous waste involvement, is additional ISA work needed before task orders can be prepared for the Investigation? No. If "YES," explain; then give an estimate of additional time required:

A brief memo should be prepared to transmit the ISA conclusions to the Project Manager and Project Engineer. Executive Summary of the ISA report provided to the Project Manager and Project Engineer.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1

EXECUTIVE SUMMARY

CERCLIS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
<i>ARABIAN AMERICAN OIL CO.</i>	<i>22 BATTERY STREET</i>	<i>11-10</i>

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 23 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 136 RCRA-SQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 11 RCRA NonGen / NLR sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 29 HIST FTTS sites within the searched area.

ARMY DEPARTMENT OF THE	211 MAIN STREET___#910	38-10,11

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 03/08/2013 has revealed that there are 317 FINDS sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 01/23/2013 has revealed that there is 1 US AIRS site within the searched area.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2011 has revealed that there are 1894 HAZNET sites within the searched area.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/06/2013 has revealed that there are 5 ENVIROSTOR sites within the searched area.

HAULERS: A listing of registered waste tire haulers.

A review of the HAULERS list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 HAULERS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
RECOLOGY, INC.	50 CALIFORNIA ST FL 24	1-1

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 04/15/2013 has revealed that there is 1 HWT site within the searched area.

EDR PROPRIETARY RECORDS

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within the searched area.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 799 EDR US Hist Auto Stat sites within the searched area.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 1283 EDR US Hist Cleaners sites within the searched area.

Map ID	Site	Database(s)	EPA ID Number
1	AIRTOUCH COMMUNICATIONS INC ONE CALIFORNIA ST SAN FRANCISCO, CA FINDS: Registry ID: 110010683769 Environmental Interest/Information System ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.	FINDS	1005671219 N/A

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 How Discovered: Tank Closure
 How Stopped: Close Tank
 Report Date: 11/18/1987
 Case Closed: 7/26/1993
 Closed Date: 7/26/1993
 Leak Source: Tank
 Leak Cause: Structure Failure
 Leak Confirmed: 4/28/1992
 Entered Date: 4/28/1992
 Number of Wells: Not reported
 Regional Board: San Francisco Bay Region
 Local Agency: 38000
 Lead Agency: Local Agency
 Program: LOP
 Responsible Party: Not reported
 RP Address: Not reported
 Operator: Not reported
 Staff Initial: VP

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	<p>RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.</p>

CHEVRON STATION 90032 (Continued)

1005441243

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012545415

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Environmental Interest/Information System		
	The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).		
	California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.		
	RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Environmental Interest/Information System RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

Historical Generators:

Date form received by agency: 05/16/2002
Facility name: CHEVRON 90535
Site name: CHEVRON STATION 90535
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

CHEVRON STATION 90535 (Continued)

1005441206

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 06/06/2008
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Environmental Interest/Information System		
	The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).		
	RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
