Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001
 Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
 Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075
 Waste name: NICOTINE, & SALTS

Waste code: P081
 Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Caseworker:	AF
Local Agency:	Not reported
RB Case Number:	38D9322
LOC Case Number:	Not reported
File Location:	Regional Board
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Heating Oil / Fuel Oil
Site History:	AST 268.1 was a 200-gallon fuel oil tank that heated an adjacent trailer serving as an office. The tank was removed some time between 1989 and 1997.

151	PRESIDIO OF SAN FRANCISCO - BLDG 269 AREA - USTS 269.1 THROU 269 MASON STREET SAN FRANCISCO, CA 94129	MCS	S109277212 N/A
-----	--	------------	---------------------------

MCS:

Global Id:	T10000000039
Latitude:	37.80597
Longitude:	-122.4489
Case Type:	Military UST Site
Status:	Completed - Case Closed
Status Date:	08/21/2008
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Caseworker:	AF
Local Agency:	Not reported
RB Case Number:	38D9239
LOC Case Number:	Not reported
File Location:	Regional Board
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Chlordane, DDD / DDE / DDT, Endrin, Other Insecticides / Pesticide / Fumigants / Herbicides, Toxaphene, Gasoline
Site History:	Pesticide solutions were mixed and formulated in the northeast corner of Building 269 and stored throughout the building. Runoff was collected in a storm drain and was routed into former UST 269.1, located to the east of the building. USTs 269.2 through 269.4 contained fuel oil. USTs 269.1 through 269.4 were removed in 1995. Tank 269.5 is believed to be nonexistent.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110012234126

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Soil only
Release Date: 4/6/1998
Discovered Date: 4/10/1998
Substance: Gasoline
Substance Qty: Not reported
How Discovered: Tank Closure
How Stopped: Repair Tank
Report Date: 4/6/1998
Case Closed: 7/16/1998
Closed Date: 7/16/1998
Leak Source: Tank
Leak Cause: Corrosion
Leak Confirmed: Not reported
Entered Date: 6/25/1998
Number of Wells: Not reported
Regional Board: San Francisco Bay Region
Local Agency: 38000
Lead Agency: Local Agency
Program: LOP
Responsible Party: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D008
 Waste name: LEAD

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

MAP FINDINGS
FOCUS MAP 11

Map ID Site Database(s) EPA ID Number

TRANSBAY TRANSIT CENTER PROGRAM TEMPORARY TERMINAL (Continued)

1011843800

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

STE. 140 SAN FRANCISCO, CA FINDS: <p>Registry ID: 110030480165</p> <p>Environmental Interest/Information System ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.</p>	FINDS	1010169708 N/A

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	FINDS: Registry ID: 110030896715 Environmental Interest/Information System ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Section 5

**Databases Searched and
Update Dates**

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/09/2013
Number of Days to Update: 62	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/04/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810
Date Made Active in Reports: 03/13/2013	Last EDR Contact: 05/29/2013
Number of Days to Update: 12	Next Scheduled EDR Contact: 09/09/2013
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/05/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810

Number of Days to Update: 12	Next Scheduled EDR Contact: 05/09/2013
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013
Date Made Active in Reports: 02/27/2013
Number of Days to Update: 12

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/10/2012

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 12/18/2012	Source: EPA
Date Data Arrived at EDR: 03/13/2013	Telephone: 703-416-0223
Date Made Active in Reports: 04/12/2013	Last EDR Contact: 06/11/2013
Number of Days to Update: 30	Next Scheduled EDR Contact: 09/23/2013
	Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 12/10/2010	Telephone: 202-564-4203

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

NOTIFY 65: Proposition 65 Records

Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

Date of Government Version: 10/21/1993	Source: State Water Resources Control Board
Date Data Arrived at EDR: 11/01/1993	Telephone: 916-445-3846
Date Made Active in Reports: 11/19/1993	Last EDR Contact: 06/18/2013
Number of Days to Update: 18	Next Scheduled EDR Contact: 10/07/2013
	Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/11/2013	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 03/12/2013	Telephone: 916-323-3400

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Yane Nordhav, P.G.

Principal Professional Geologist

M.S., Geology, Cal State Hayward, 1988
B.A., Geology, U.C. Berkeley, 1976
40-hour HAZWOPER training
Professional Geologist No. 4009, 1985
35 years of experience

Recent Projects

- Sacramento Trapshoot Club, investigation, remediation, agency negotiations, Project Manager, 2004-2010
- New Crystal Springs Bypass Tunnel EIR, San Francisco Public Utilities Commission, Project Manager, 2006-2008.
- Bayview Transportation Improvements Project EIR/EIS, Technical lead for Hazardous Materials and Water Quality Technical Studies, 2004-present.
- Port of Oakland, Berths 25 and 26, investigation, remediation, agency negotiations, 2002-present.
- Technical litigation support for sites along the Bay margin, 1998-present.
- Port of Oakland, Development of soil reuse criteria for Port capital projects, 2010-2012.

Yane Nordhav is a principal of BASELINE. She is a principal-in-charge for BASELINE projects related to hazardous materials management, development of remedial actions, site characterizations, and CEQA/NEPA documentation. She performs QA/QC functions for all projects at BASELINE.

As principal investigator, she has managed and conducted groundwater investigations and remediation on major Superfund sites and local brownfields sites in California, including media contaminated with petroleum hydrocarbons, solvents, metals and manufactured gas plant wastes.

Through her work, she has developed an extensive working knowledge of regulatory requirements and established working relationships with regulatory agency staff on the state and local levels. She routinely works with the Regional Water Quality Control Board, Department of Toxic Substances Control, and local agency staff to arrive at appropriate goals for risk-based cleanup of soil and groundwater resources.

She has managed major environmental audits and developed environmental programs for cities, ports, and industrial clients; her work has included development of strategies for waste management and minimization, soil reuse protocols for large municipal clients, and UST compliance programs.

She also routinely provides technical litigation support and expert witness services to clients on sites that have been affected by historic land uses and require cleanup prior to future productive uses.

In addition, Ms. Nordhav has been the project manager for the preparation of major environmental documents in California, including EIRs for controversial projects, ranging from open pit mines, hazardous waste disposal facilities, water supply infrastructure projects, and new towns. Some of the EIRs she has managed has received awards from the Association of Environmental Professionals as the Document of the Year.

As technical reviewer for hazardous materials and CEQA projects, she provides quality control for reports prior to submittal to clients. She routinely reviews Phase I and Phase II reports, as well as remedial investigations, removal action workplans, remedial action plans, and remedial design and implementation plans for compliance with CERCLA.

Todd Taylor

Environmental Associate

M.S., Applied Geosciences, University of Pennsylvania (candidate – graduation 2013)

B.A., English, Northwestern University, Evanston, Illinois

40-hour OSHA training, 1995

8-hour OSHA supervisor training, 2002

19 years of experience

Recent Projects

- SFMTA Transit Effectiveness Project Initial Study, Technical Lead on Geology, Hydrology, and Hazards
- Children's Hospital and Research Center-Oakland Replacement Hospital Facilities EIR, Technical Lead on Hydrology and Hazards
- Geary Corridor Bus Rapid Transit Project EIR/EIS, Technical Lead on Hazardous Materials and Hydrology
- Doyle Drive Replacement Project EIR/EIS, San Francisco, Technical Lead on Hazardous Materials Analysis
- San Francisco General Hospital Rebuild Program EIR, Public Health and Safety analysis
- Apple Campus EIR, Cupertino, Technical Lead for Hydrology EIR analysis

Todd Taylor has prepared hazardous materials, geology, and hydrology technical reports and impact evaluations for more than one hundred CEQA and NEPA documents. He has worked on large-scale residential, commercial, infrastructure, and industrial projects, as well as general and specific plans throughout the Northern California. His experience with hydrogeologic analyses, NPDES regulatory requirements, and hazardous materials issues has provided clients with thorough and legally defensible analyses for complex projects.

Mr. Taylor has also served as project manager for more than two hundred Phase I and Phase II environmental site assessments for public and private clients throughout California. Many of these were prepared under as-needed environmental services contracts BASELINE has held with San Francisco Department of Public Works.

Mr. Taylor is experienced in using CAD, GIS systems, and hydrologic modeling software in complex projects requiring the efficient management and interpretation of large amounts of environmental data. He assisted in the development of an environmental GIS system for the San Francisco International Airport, designed to provide quick access to data from environmental investigations performed by airport staff, tenants, and regulatory agencies.

Mr. Taylor is thoroughly familiar with standard industry practice and current ASTM standards and EPA AAI guidances for Phase I and II reports, which he has used in the preparation of numerous third-party reviews of environmental documentation prepared by other firms.

Mr. Taylor is experienced in the use of computer statistics packages and relational databases. He has used his skills in computer statistical analysis and database management to manage large data sets for projects such as hazardous waste reclassification applications and health risk assessments.

MONIKA KRUPA

Environmental Scientist I

M.S., Soils and Biogeochemistry, University of California, Davis

B.A., Environmental Sciences, Biological Emphasis, University of California, Berkeley

40-hour OSHA training

4 years of experience

Recent Projects

- New Irvington Tunnel Project, data management, 2012 to Present.
- Westside Basin Groundwater Supply Monitoring Program, field data management and groundwater sampling, 2012 to Present.
- Foster City Civic Center EIR, Hydrology and Water Quality Section, Hazards and Hazardous Materials Section, 2012 to present.
- Gilead Sciences Corporate Campus Master Plan EIR, Hydrology and Water Quality Section, 2012.
- California Maritime Academy Security Building Project IS/MND, Hydrology and Water Quality Section, 2012.
- Environmental Inspector for construction along San Francisco waterfront for Port of San Francisco, Oct 2012 to Jan 2013.
- Evans Avenue and Rankin Street, San Francisco, Phase I Environmental Site Assessment, 2012.

Monika Krupa is an environmental scientist. She has prepared the hydrology and water quality sections of numerous Initial Studies and EIRs and has reviewed the compliance strategies developed by other firms for projects subject to Municipal Regional Permit requirements. She is also experienced in carrying out Phase I environmental site assessments in accordance with standard industry practice and current ASTM standards and EPA All Appropriate Inquiry regulations for Phase I reports.

Ms. Krupa has participated in numerous hazardous materials investigations and remediation projects. Her field experience includes groundwater level monitoring, soil and groundwater sampling, supervising the testing of soil vapor extraction systems, carrying out groundwater aquifer testing, and supervising the installation and destruction of groundwater monitoring wells. She has worked at a variety of hazardous materials sites impacted with lead, asbestos, petroleum hydrocarbons, and chlorinated solvents, including: service stations, landfills, railroads alignments, petroleum refineries, and power plants

Aspects of her work included completing monitoring reports and sensitive receptor surveys, planning groundwater aquifer testing and monitoring activities, obtaining permits, developing soil and groundwater remediation work plans, database management, and statistical analysis of environmental data.

Ms. Krupa also has experience as a soil and water quality researcher at UC Davis. Her projects were designed to monitor the soil and surface water quality impacts of agricultural irrigation practices and silvicultural land management practices, and were carried out within the Glenn-Colusa Irrigation District jurisdiction and Lassen National Forest. This work involved designing surface water quality monitoring plans, collecting water samples and field discharge measurements, performing sample analysis, compiling and managing multiple databases, statistical analysis and modeling, and reporting.

Air Quality Conformity

From: <fms@mtc.ca.gov>

Date: Fri, May 23, 2014 at 4:33 PM

Subject: FMS POAQC Project TIP ID SF-070004 (Geary Bus Rapid Transit) update: Project is a not a POAQC

To: chester.fung@sfcta.org, eileen.ross@sfmta.com

Cc: fms@mtc.ca.gov, hbrazil@mtc.ca.gov

Dear Project Sponsor

Based on the recent interagency consultation with the Air Quality Conformity Task force, Project TIP ID SF-070004 (FMS ID:2292.00) does not fit the definition of a project of air quality concern as defined by 40 CFR 93.123(b)(1) or 40 CFR 93.128 and therefore is not subject to PM2.5 project level conformity requirement. Please save this email as documentation confirming the project has undergone and completed the interagency consultation requirement for PM2.5 project level conformity. Note project sponsors are required to undergo a proactive public involvement process which provides opportunity for public review as outlined by 40 CFR 93.105(e). For projects that are not of air quality concern, a comment period is only required for project level conformity determinations if such a comment period would have been required under NEPA. For more information, please see FHWA PM2.5 Project Level Conformity Frequently Asked Questions (FAQ):

http://www.fhwa.dot.gov/environment/air_quality/conformity/reference/faqs/pm25faqs.cfm

If you have any questions, please direct them to Harold Brazil at hbrazil@mtc.ca.gov or by phone at [\(510\) 817-5747](tel:(510)817-5747)

Air Quality and Greenhouse Gas Report

This page intentionally left blank.

4.12 Air Quality and Greenhouse Gases

This Air Quality Impact Report provides an overview of existing air quality conditions and evaluates the construction and operational impacts associated with the proposed project. This analysis focuses on air pollution from two perspectives: daily emissions and pollutant concentrations. Emissions refer to the quantity of pollutants released into the air, measured in pounds per day. Concentrations refer to the amount of pollutant material per volumetric unit of air, measured in parts per million or micrograms per cubic meter. The following defines the pollutants discussed in this analysis.

The federal and State governments have established ambient air quality standards for outdoor concentrations of six common pollutants, called criteria pollutants, to protect public health. The criteria pollutant standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Criteria pollutants include carbon monoxide (CO), ozone (O₃), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), particulate matter 2.5 microns or less in diameter (PM_{2.5}), particulate matter ten microns or less in diameter (PM₁₀), and lead (Pb). These pollutants are discussed below.

CO is a colorless and odorless gas formed by the incomplete combustion of fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft and trains. In urban areas such as the project location, automobile exhaust accounts for the majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly, so ambient CO concentrations generally follows the spacial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions, primarily wind speed, topography and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, a typical situation at dusk in urban areas between November and February. Inversion is an atmospheric condition in which a layer of warm air traps cooler air near the surface of the earth, preventing the normal rising of surface air. The highest levels of CO typically occur during the colder months of the year when inversion conditions are more frequent. In terms of health, CO competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can be dizziness, fatigue, and impairment of central nervous system functions.

O₃ a colorless gas that is formed in the atmosphere when reactive organic gases (ROG), which includes volatile organic compounds (VOC) and NO_x react in the presence of ultraviolet sunlight. O₃ is not a primary pollutant; it is a secondary pollutant formed by complex interactions of two pollutants directly emitted into the atmosphere. The primary sources of ROG and NO_x, components of O₃, are automobile exhaust and industrial sources. Meteorology and terrain play major roles in O₃ formation. Ideal conditions occur during summer and early autumn, on days with low wind speeds or stagnant air, warm temperatures and cloudless skies. The greatest source of smog-producing gases is the automobile. Short-term exposure

(lasting for a few hours) to O₃ at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue and some immunological changes.

NO₂, like O₃, is not directly emitted into the atmosphere but is formed by an atmospheric chemical reaction between nitric oxide (NO) and atmospheric oxygen. NO and NO₂ are collectively referred to as NO_x and are major contributors to O₃ formation. NO₂ also contributes to the formation of PM₁₀. High concentrations of NO₂ can cause breathing difficulties and result in a brownish-red cast to the atmosphere with reduced visibility. There is some indication of a relationship between NO₂ and chronic pulmonary fibrosis. Some increase of bronchitis in children (two and three years old) has also been observed at concentrations below 0.3 ppm.

SO₂ is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Main sources of SO₂ are coal and oil used in power plants and industries. Generally, the highest levels of SO₂ are found near large industrial complexes. In recent years, SO₂ concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO₂ and limits on the sulfur content of fuels. SO₂ is an irritant gas that attacks the throat and lungs. It can cause acute respiratory symptoms and diminished ventilator function in children. SO₂ can also yellow plant leaves and erode iron and steel. Sulfur oxide (SO_x) refers to any of several compounds of sulfur and oxygen, the most important of which is SO₂.

Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter also forms when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. PM_{2.5} and PM₁₀ represent fractions of particulate matter. Fine particulate matter, or PM_{2.5}, is roughly 1/28 the diameter of a human hair. PM_{2.5} results from fuel combustion (e.g. motor vehicles, power generation, and industrial facilities), residential fireplaces, and wood stoves. In addition, PM_{2.5} can be formed in the atmosphere from gases such as SO₂, NO_x, and VOC. Inhalable particulate matter, or PM₁₀, is about 1/7 the thickness of a human hair. Major sources of PM₁₀ include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions.

PM_{2.5} and PM₁₀ pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. PM_{2.5} and PM₁₀ can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances, such as lead, sulfates, and nitrates can cause lung damage directly. These substances can be absorbed into the blood stream and cause damage elsewhere in the body. These substances can transport absorbed gases, such as chlorides or ammonium, into the lungs and cause injury. Whereas PM₁₀ tends to collect in the upper portion of the respiratory system, PM_{2.5} is so tiny that it can penetrate deeper into the lungs and

damage lung tissues. Suspended particulates also damage and discolor surfaces on which they settle, as well as produce haze and reduce regional visibility.

Lead in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline; the manufacturers of batteries, paint, ink, ceramics, and ammunition; and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phase-out of leaded gasoline reduced the overall inventory of airborne lead by nearly 95 percent. With the phase-out of leaded gasoline, secondary lead smelters, battery recycling, and manufacturing facilities have become lead-emission sources of greater concern. Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance, including intelligence quotient performance, psychomotor performance, reaction time, and growth.

Toxic Air Contaminants (TACs) are generally defined as those contaminants that are known or suspected to cause serious health problems, but do not have a corresponding ambient air quality standard. TACs are also defined as an air pollutant that may increase a person's risk of developing cancer and/or other serious health effects; however, the emission of a toxic chemical does not automatically create a health hazard. Other factors, such as the amount of the chemical; its toxicity, and how it is released into the air, the weather, and the terrain, all influence whether the emission could be hazardous to human health. TACs are emitted by a variety of industrial processes such as petroleum refining, electric utility and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust and may exist as PM₁₀ and PM_{2.5} or as vapors (gases). TACs include metals, other particles, gases absorbed by particles, and certain vapors from fuels and other sources.

The emission of toxic substances into the air can be damaging to human health and to the environment. Human exposure to these pollutants at sufficient concentrations and durations can result in cancer, poisoning, and rapid onset of sickness, such as nausea or difficulty in breathing. Other less measurable effects include immunological, neurological, reproductive, developmental, and respiratory problems. Pollutants deposited onto soil or into lakes and streams affect ecological systems and eventually human health through consumption of contaminated food. The carcinogenic potential of TACs is a particular public health concern because many scientists currently believe that there is no "safe" level of exposure to carcinogens. Any exposure to a carcinogen poses some risk of contracting cancer.

4.12.1 | Regulatory Setting

4.12.1.1 | CRITERIA POLLUTANTS AND TOXIC AIR CONTAMINANTS

4.12.1.1.1 FEDERAL

United States Environmental Protection Agency

The Federal Clean Air Act (CAA) governs air quality in the United States. The United States Environmental Protection Agency (USEPA) is responsible for

enforcing the CAA. USEPA is also responsible for establishing the National Ambient Air Quality Standards (NAAQS). NAAQS are required under the 1977 CAA and subsequent amendments. USEPA regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain types of locomotives. USEPA has jurisdiction over emission sources outside state waters (e.g., beyond the outer continental shelf) and establishes various emission standards, including those for vehicles sold in states other than California.¹

Under the CAA, NAAQS have been established for seven major air pollutants:

- carbon monoxide (CO)
- ozone (O₃)
- nitrogen dioxide (NO₂)
- sulfur dioxide (SO₂)
- particulate matter 2.5 microns or less in diameter (PM_{2.5})
- particulate matter 10 microns or less in diameter (PM₁₀)
- lead (Pb)

The CAA requires USEPA to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for each criteria pollutant based on whether the NAAQS have been achieved. The federal standards are summarized in Table 4.12-1. The USEPA has classified the Basin as attainment for SO₂, maintenance for CO and nonattainment for O₃, PM_{2.5}, and PM₁₀.

Title III of the FCAAA requires the USEPA to promulgate national emissions standards for hazardous air pollutants (NESHAPs). The NESHAP may differ for major sources than for area sources of hazardous air pollutants (HAPs) (major sources are defined as stationary sources with potential to emit more than 10 tons per year (TPY) of any HAP or more than 25 TPY of any combination of HAPs; all other sources are considered area sources). The emissions standards are to be promulgated in two phases. In the first phase (1992 to 2000), the USEPA developed technology-based emission standards designed to produce the maximum emission reduction achievable. These standards are generally referred to as requiring Maximum Achievable Control Technology (MACT). These federal rules are also commonly referred to as MACT standards, because they reflect the MACT. For area sources, the standards may be different, based on generally available control technology. In the second phase (2001 to 2008), the USEPA is required to promulgate health risk–based emissions standards where deemed necessary to address risks remaining after implementation of the technology-based NESHAP standards.

¹ Automobiles sold in California must meet stricter emission standards established by California Air Resources Board (CARB).

Table 4.12-1 State and National Ambient Air Quality Standards and Attainment Status for the Bay Area Air Basin

POLLUTANT	AVERAGING PERIOD	FEDERAL (NAAQS)		CALIFORNIA	
		STANDARDS	ATTAINMENT STATUS	STANDARDS	ATTAINMENT STATUS
Ozone	1-hour	No federal standard	No federal standard	0.09 ppm (180 µg/m³)	Nonattainment
	8-hour	0.075 ppm (147 µg/m³)	Nonattainment	0.070 ppm (137 µg/m³)	Nonattainment
Respirable particulate matter (PM ₁₀)	24-hour	150 µg/m³	Unclassified	50 µg/m³	Nonattainment
	Annual Arithmetic Mean	No federal standard	No federal standard	20 µg/m³	Nonattainment
Fine particulate matter (PM _{2.5})	24-hour	35 µg/m³	Nonattainment	No state standard	No state standard
	Annual Arithmetic Mean	12 µg/m³	Attainment	12 µg/m³	Nonattainment
Carbon monoxide	8-hour	9 ppm (10 mg/m³)	Attainment/Maintenance	9.0 ppm (10 mg/m³)	Attainment
	1-hour	35 ppm (40 mg/m³)	Attainment/Maintenance	20 ppm (23 mg/m³)	Attainment
Nitrogen dioxide	Annual Arithmetic Mean	53 ppb (100 µg/m³)	Attainment	0.030 ppm (57 µg/m³)	Attainment
	1-hour	100 ppb (188 µg/m³) /a/	Unclassified	0.18 ppm (338 µg/m³)	Attainment
Sulfur dioxide	24-hour	0.14 ppm (365 µg/m³)	Attainment	0.04 ppm (105 µg/m³)	Attainment
	1-hour	75 ppb (196 µg/m³)	Attainment	0.25 ppm (655 µg/m³)	Attainment
Lead	30-day average	--	Attainment	1.5 µg/m³	Attainment
	Calendar Quarter	1.5 µg/m³	Attainment	No state standard	No state standard
	Rolling 3-Month Average	0.15 µg/m³	--	No state standard	No state standard
Visibility reducing particles	8-hour	No federal standard		Extinction coefficient of 0.23 per kilometer	Unclassified
Sulfates	24-hour	No federal standard		25 µg/m³	Attainment
Hydrogen sulfide	1-hour	No federal standard		0.03 ppm (42 µg/m³)	Unclassified

The CAA requires the USEPA to promulgate vehicle or fuel standards containing reasonable requirements that control toxic emissions, at a minimum to benzene and formaldehyde. Performance criteria were established to limit mobile-source emissions of toxics, including benzene, formaldehyde, and 1,3-butadiene. In addition, Section 219 of the CAA requires certain urban bus systems (those in areas with the most severe ozone nonattainment conditions) to use reformulated gasoline to further reduce mobile-source emissions.

The U.S. Supreme Court has ruled² that carbon dioxide (CO₂), a greenhouse gas (GHG) is also an air pollutant as defined under the CAA, and that USEPA has the authority to regulate emissions of GHGs. Further discussion federal regulations on GHG follows below.

Transportation Conformity

Transportation conformity is an analysis required under CAA section 176(c) (42 U.S.C. 7506(c)) to ensure that federally supported highway and transit project activities are consistent with the purpose of the state Implementation Plan (SIP). Regional conformity for a given project is analyzed by discussing if the proposed project is included in a conforming Regional Transportation Plan (RTP) or Transportation Improvement Plan (TIP) with substantially the same design concept and scope that was used for the regional conformity analysis. Project level conformity is analyzed by discussing if the proposed project would cause localized exceedances of carbon monoxide, PM_{2.5}, and/or PM₁₀ standards, or if it would interfere with “timely implementation” of Transportation Control Measures called out in the State Implementation Plan (SIP).

Mobile Source Air Toxics (MSAT)

In addition to NAAQS for criteria pollutants, the CAA identified a list of 188 urban air toxics, alternatively known as toxic air contaminants (TACs). In its final ruling in March 2001, EPA narrowed this list to a group of 21 mobile-source air toxics (MSAT).³ From this list of 21 MSATs, EPA identified six priority MSATs: benzene, formaldehyde, acetaldehyde, diesel particulate matter/diesel exhaust organic gases, acrolein, and 1,3-butadiene. To address emissions of MSATs, EPA has introduced a number of measures targeting cleaner fuels and cleaner engines.

In March 2001, EPA issued regulations requiring the producers of urban air toxics to decrease emissions of these pollutants by target dates in 2007 and 2020. As a result, on-highway emissions of benzene, formaldehyde, 1,3-butadiene and acetaldehyde will be reduced by amounts ranging from 67 percent to 76 percent between 1990 and 2020. On-highway diesel particulate matter (DPM) emissions will be reduced by 90 percent. These reductions are expected as a result of the national mobile source control programs, including:

- The reformulated gasoline program;
- A new threshold for the toxic content of gasoline;
- The national low emission vehicle standards;
- The Tier 2 motor vehicle emissions standards and gasoline sulfur control requirements; and
- The heavy duty engine and vehicle standards; and on-highway diesel fuel sulfur control requirements.

The predicated improvements are net emission reductions, which will be experienced even after growth in vehicle miles traveled (VMT) is taken into account.

² *Massachusetts v. Environmental Protection Agency* ([2007] 549 U.S. 05-1120)

³ Control of Emissions of Hazardous Air Pollutants from Mobile Sources, 66 F.R. 17235

Mandatory Greenhouse Gas Reporting Rule

In 2009, USEPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the United States. In general, this national reporting requirement will provide USEPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of carbon dioxide per year. This publically available data will allow the reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future. Reporting is at the facility level, except that certain suppliers of fossil fuels and industrial greenhouse gases along with vehicle and engine manufacturers will report at the corporate level. An estimated 85 percent of the total US GHG emissions, from approximately 10,000 facilities, are covered by this final rule.⁴

Endangerment and Cause or Contribute Findings for Greenhouse Gases under Clean Air Act Section 202(a)

In December 2009, the EPA Administrator signed two distinct findings regarding greenhouse gases under Section 202(a) of the Clean Air Act.

Endangerment Finding: The Administrator found that the current and projected concentrations of the six key GHGs (i.e., carbon dioxide, methane, nitrogen dioxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride) in the atmosphere threaten the public health and welfare of current and future generations.

Cause or Contribute Finding: The Administrator found that the combined emissions of these GHGs from new motor vehicles and motor vehicle engines contribute to the GHG pollution which threatens public health and welfare.

These finding were necessary prerequisites for implementing emissions standards for vehicles. In collaboration with the National Highway Traffic Safety Administration (NHTSA), EPA finalized emission standards for light-duty vehicles (2012-2016 model years) in May of 2010 and heavy-duty vehicles (2014-2018 model years) in August of 2011.

Council on Environmental Quality Guidelines

The Council on Environmental Quality (CEQ) has provided a draft guidance memorandum on the ways in which federal agencies can improve their consideration of the effects GHG emissions in NEPA documents.⁵ The guidance states that direct emissions from a proposed action of 25,000 metric TPY of carbon dioxide equivalent (or CO_{2e}) can be used as indicator that a quantitative and qualitative assessment may be meaningful to decision makers.

⁴BAAQMD, *CEQA Air Quality Guidelines*, June 2010.

⁵Council on Environmental Quality, *Draft NEPA Guidance on Consideration of the Effects of Climate Change and Greenhouse Gas Emissions*, February 18, 2010.

4.12.1.1.2 STATE

California Air Resources Board

In addition to being subject to the requirements of CAA, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CCAA). In California, the CCAA is administered by the California Air Resources Board (CARB) at the state level and by the air quality management districts and air pollution control districts at the regional and local levels. The CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for meeting the state requirements of the CAA, administering the CCAA, and establishing the California Ambient Air Quality Standards (CAAQS). The CCAA, as amended in 1992, requires all air districts in the state to endeavor to achieve and maintain the CAAQS. CAAQS are generally more stringent than the corresponding federal standards and incorporate additional standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. CARB regulates mobile air pollution sources, such as motor vehicles. CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB established passenger vehicle fuel specifications, which became effective in March 1996. CARB oversees the functions of local air pollution control districts and air quality management districts, which, in turn, administer air quality activities at the regional and county levels. The state standards are summarized in Table 4.12-1.

The CCAA requires CARB to designate areas within California as either attainment or non-attainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as non-attainment for a pollutant if air quality data shows that a state standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a State standard and are not used as a basis for designating areas as nonattainment. Under the CCAA, the San Francisco County portion of the Basin is designated as a nonattainment area for O₃, PM_{2.5}, and PM₁₀.⁶

State Toxic Air Contaminant Programs

California regulates Toxic Air Contaminants (TACs) primarily through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588).

AB1807 sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB can designate a substance as a TAC. To date, CARB has identified over 21 TACs, and adopted the USEPA's list of HAPs as TACs. Most recently, diesel exhaust particulate was added to the CARB list of TACs. Once a TAC is identified, CARB's then adopts an Airborne Toxics Control Measure for sources that emit that particular TAC. None of the TACs identified by CARB have a "safe threshold;" exposure to these TACs is therefore considered in terms of long-term elevated health risk.

⁶CARB, *Area Designation Maps*, available at <http://www.arb.ca.gov/desig/adm/adm.htm>, accessed March 19, 2012.

The Hot Spots Act (AB 2588) requires that existing facilities that emit toxic substances above specified levels:

- Prepare a toxic emission inventory;
- Prepare a risk assessment if emissions are significant;
- Notify the public of significant risk levels; and
- Prepare and implement risk reduction measures.

CARB has adopted diesel exhaust control measures and more stringent emission standards for various on-road mobile sources of emissions, including transit buses and off-road diesel equipment (e.g., tractors, generators).

In February 2000, CARB adopted a new public transit bus fleet rule and emission standards for new urban buses. These rules and standards provide for more stringent emission standards for some new urban bus engines beginning with 2002 model year engines, zero-emission bus demonstration and purchase requirements applicable to transit agencies, and reporting requirements with which transit agencies must demonstrate compliance with the urban transit bus fleet rule. Milestones include the low sulfur diesel fuel requirement, and tighter emission standards for heavy-duty diesel trucks (2007) and off-road diesel equipment (2011) nationwide.

Over time, the replacement of older vehicles will result in a vehicle fleet that produces substantially less TACs than under current conditions. Mobile-source emissions of TACs (e.g., benzene, 1-3-butadiene, diesel PM) have been reduced significantly over the last decade, and will be reduced further in California through a progression of regulatory measures (e.g., Low Emission Vehicle/Clean Fuels and Phase II reformulated gasoline regulations) and control technologies. With implementation of CARB's Risk Reduction Plan, it is expected that diesel PM concentrations will be reduced by 85 percent in 2020 from the estimated year 2000 levels.⁷ Adopted regulations are also expected to continue to reduce formaldehyde emissions from cars and light-duty trucks. As emissions are reduced, it is expected that risks associated with exposure to the emissions will also be reduced.

Assembly Bill 1493 (AB 1493)

AB 1493 requires the development and adoption of regulations to achieve “the maximum feasible reduction of greenhouse gases” emitted by noncommercial passenger vehicles, light-duty trucks, and other vehicles used primarily for personal transportation in the state. In 2009, CARB adopted amendments to the AB 1493 regulations that reduce greenhouse gas (GHG) emissions in new passenger vehicles from 2009 through 2016. These amendments are part of California's commitment toward a nation-wide program to reduce new passenger vehicle GHGs from 2012 through 2016.

Executive Order (E.O.) S-3-05

This order established state GHG emission targets of 1990 levels by 2020 (the same as AB 32, enacted later and discussed below) and 80 percent below 1990 levels by 2050. It calls for the Secretary of the Cal/EPA to be responsible for coordination of state agencies and progress reporting.

⁷BAAQMD, *CEQA Air Quality Guidelines*, June 2010.

In response to the E.O., the Secretary of the Cal/EPA created the Climate Action Team (CAT). California's CAT originated as a coordinating council organized by the Secretary for Environmental Protection.

Assembly Bill 32 (AB 32), California Global Warming Solutions Act of 2006

AB 32 focuses on reducing GHG emissions in California, and requires CARB to adopt rules and regulations that would achieve greenhouse gas emissions equivalent to statewide levels in 1990 by 2020. To achieve this goal, AB 32 mandates that CARB establish a quantified emissions cap, institute a schedule to meet the cap, implement regulations to reduce statewide GHG emissions from stationary sources, and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved. Because the intent of AB 32 is to limit 2020 emissions to the equivalent of 1990, it is expected that the regulations would affect many existing sources of GHG emissions and not just new general development projects.

AB 32 charges CARB with the responsibility to monitor and regulate sources of GHG emissions in order to reduce those emissions. In 2007, CARB adopted a series of early action measures to reduce GHG emissions. Among these, transportation-related measures included complying with a low carbon fuel standard, reducing refrigerant loss from motor vehicle air conditioning maintenance, and promoting proper tire inflation in vehicles.

CARB has determined that the total statewide aggregated GHG 1990 emissions level and 2020 emissions limit is 427 million metric tons of CO_{2e}. The 2020 target reductions are currently estimated to be 174 million metric tons of CO_{2e}.

AB 32 Climate Change Scoping Plan

The CARB AB 32 Scoping Plan contains the main strategies to achieve the 2020 emissions cap. The Scoping Plan was developed by CARB with input from CAT and proposes a comprehensive set of actions designed to reduce overall carbon emissions in California, improve the environment, reduce oil dependency, diversify energy sources, and enhance public health while creating new jobs and improving the state economy. The GHG reduction strategies contained in the Scoping Plan include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, and market-based mechanisms such as a cap-and-trade system. Two of several key approaches for reducing greenhouse gas emissions to 1990 levels by 2020 include:

- Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets; and
- Adopting and implementing measures to reduce transportation sector emissions, including California's.

CARB has also developed the GHG mandatory reporting regulation, which required reporting beginning on January 1, 2008 pursuant to requirements of AB 32. The regulations require reporting for certain types of facilities that make up the bulk (up to 94 percent) of the stationary source emissions in California.

In February 2014, CARB published a draft Proposed First Update to the Climate Change Scoping Plan. This Update identifies the next steps for California's leadership on climate change.

As part of the Update, CARB is proposing to revise the 2020 statewide limit to 431 million metric tons of CO_{2e}, an approximately one percent increase from the original estimate. The 2020 business-as-usual (BAU) forecast in the Update is 509 million metric tons of CO_{2e}. The state would need to reduce those emissions by 15 percent to meet the new limit of 431 million metric tons.

Executive Order (E.O.) S-1-07

This E.O. established a Low-Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels.

4.12.1.1.3 REGIONAL

The Bay Area Air Quality Management District (BAAQMD) attains and maintains air quality conditions in the San Francisco Bay Area Air Basin (SFBAAB) through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. BAAQMD has jurisdiction over an approximately 5,600-square-mile area of the San Francisco Bay Area (Bay Area), including all of San Francisco County.

The BAAQMD established a climate protection program to reduce pollutants that contribute to global climate change and affect air quality in the Air Basin. The climate protection program includes measures that promote energy efficiency, reduce vehicle miles traveled, and develop alternative sources of energy all of which assist in reducing emissions of GHG and in reducing air pollutants that affect the health of residents. BAAQMD also seeks to support current climate protection programs in the region and to stimulate additional efforts through public education and outreach, technical assistance to local governments and other interested parties, and promotion of collaborative efforts among stakeholders.

The clean air strategy of the BAAQMD includes the preparation of plans for the attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution. The BAAQMD also inspects stationary sources of air pollution and responds to citizen complaints, monitors ambient air quality and meteorological conditions, and implements programs and regulations required by the CAA and the CCAA.

The BAAQMD last updated its CEQA Guidelines between 2009 and 2011. This is an advisory document that offers guidance to the Lead Agency, consultants, and project applicants for addressing air quality in environmental documents.⁸

⁸ The preparers of this EIR/EIS have reviewed the evidence used to formulate the BAAQMD CEQA Guidelines including BAAQMD's May 2010 staff report recommending the adoption of the thresholds and its attachments, and conclude that substantial evidence supports the continued use of BAAQMD's 2010 thresholds of significance as thresholds of significance for air quality and greenhouse gas impacts in this EIR.

The handbook contains the following applicable components:

- Criteria and thresholds for determining whether a project may have a significant adverse air quality impact;
- Specific procedures and modeling protocols for quantifying and analyzing air quality impacts;
- Methods available to mitigate air quality impacts; and
- Information for use in air quality assessments and environmental documents that will be updated more frequently such as air quality data, regulatory setting, climate, and topography.

BAAQMD has jurisdiction over an approximately 5,600-square-mile area of the San Francisco Bay Area. This area includes all of Alameda County, Contra Costa County, Marin County, San Francisco County, San Mateo County, Santa Clara County, and Napa County, the southwestern portion of Solano County and the southern portion of Sonoma County.

As stated above, the BAAQMD prepares plans to attain ambient air quality standards in the Air Basin. The BAAQMD prepares ozone attainment plans (OAP) for the national ozone standard and clean air plans (CAP) for the California standard both in coordination with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG). With respect to applicable air quality plans, the BAAQMD prepared the 2010 Clean Air Plan (CAP) to address nonattainment of the national one- and eight-hour ozone standard in the Air Basin. The three purposes of the 2010 CAP are to: 1) reduce emissions and decrease ambient concentrations of harmful pollutants, 2) safeguard public health by reducing exposure to air pollutants that pose the greatest health risk, and 3) reduce greenhouse gas emissions to protect the climate. To achieve the three core purposes of the 2010 CAP, the control strategy proposes are designed to:

- Reduce emissions of ozone precursors, PM, air toxics, and greenhouse gases;
- Continue progress toward attainment of state ozone standards;
- Reduce transport of ozone precursors to neighboring air basins;
- Protect public health by reducing population exposure to the most harmful air pollutants; and
- Protect the climate.

Similarly, the BAAQMD prepared the 2010 CAP to address nonattainment of the CAAQS.

The BAAQMD has regulated TACs since the 1980s. At the local level, air pollution control or management districts may adopt and enforce CARB's control measures. Under BAAQMD Regulation 2-1 (General Permit Requirements), Regulation 2-2 (New Source Review), and Regulation 2-5 (New Source Review of Toxic Air Contaminants), all nonexempt sources that possess the potential to emit TACs are required to obtain permits from BAAQMD. Permits may be granted to these operations if they are constructed and operated in accordance with applicable regulations, including new source review standards and air toxics control measures. The BAAQMD limits emissions and public exposure to TACs through a number of

programs. The BAAQMD prioritizes TAC-emitting stationary sources based on the quantity and toxicity of the TAC emissions and the proximity of the facilities to sensitive receptors.

Naturally occurring asbestos (NOA) was identified as a TAC in 1986 by CARB. NOA is located in many parts of California and is commonly associated with ultramafic rocks, according to the California Department of Geology's special publication titled *Guidelines for Geologic Investigations of Naturally Occurring Asbestos in California*.⁹ BAAQMD's NOA program requires that the applicable notification forms from the Air District's website be submitted by qualifying operations in accordance with the procedures detailed in the air toxics control measures (ATCM) Inspection Guidelines Policies and Procedures. The Lead Agency shall reference BAAQMD's ATCM Policies and Procedures to determine which NOA Notification Form is applicable to the proposed project (NOA Notification Forms). The ATCM requires regulated operations engaged in road construction and maintenance activities, construction and grading operations, and quarrying and surface mining operations in areas where NOA is likely to be found, to employ the best available dust mitigation measures to reduce and control dust emissions.

In addition, the BAAQMD has adopted Regulation 11, Rule 2 which addresses asbestos demolition renovation, manufacturing, and standards for asbestos containing serpentine (Appendix F). The purpose of Regulation 11, Rule 2 is to control emissions of asbestos to the atmosphere during demolition, renovation, milling and manufacturing and establish appropriate waste disposal procedures.¹⁰ Some of the regulations listed in Regulation 11, Rule 2 include:

- **Visible Emissions:** There shall be no visible emissions to the outside air from any asbestos mill or from any operation involving the demolition, renovation, removal, manufacture or fabrication of any product containing asbestos.

Demolition, Renovation, and Removal: To prevent emissions from asbestos containing material, a person responsible for scheduled, nonscheduled, or emergency demolition, renovation, or removal of any building elements containing any amount of RACM shall use the procedures specified in subsections 303.1 through 303.13. This shall not apply to maintenance or decontamination procedures where no removal takes place.

- **Waste Disposal:** To prevent emissions from asbestos-containing material, a person responsible for the collection, processing (including incineration and conversion), packaging, transporting, or disposition of any asbestos-containing waste material which is generated by manufacturing; fabricating; scheduled, nonscheduled, or emergency demolition or renovation, whether notified or not; spraying operations; or asbestos milling, shall use procedures specified in Regulation 11, Rule 2, Standard 304.

⁹ California Geological Survey. (2002). *Guidelines for Geologic Investigations of Naturally Occurring Asbestos in California*. California Department of Geology's Special Publication 124. Retrieved from: http://www.conservation.ca.gov/cgs/minerals/hazardous_minerals/asbestos/Documents/Asbestos_Guidelines_SP124.pdf. Accessed 4/14/14.

¹⁰BAAQMD, *Regulation 11, Rule 2*, October 1998.

- *Waste Disposal Sites:* There shall be no visible emissions to the outside air from a waste disposal site where asbestos-containing waste material has been or is being deposited.

4.12.1.1.4 LOCAL

San Francisco General Plan Air Quality Element

The San Francisco General Plan includes the 1997 Air Quality Element.¹¹ Relevant objectives include the following:

- Objective 1: Adhere to state and federal standards and regional programs.
- Objective 2: Reduce mobile sources of air pollution through implementation of the Transportation Element of the San Francisco General Plan.
- Objective 3: Decrease the air quality impacts of development by coordination of land use and transportation decisions.
- Objective 4: Improve air quality by increasing public awareness regarding the negative health effects of pollutants generated by stationary and mobile sources.
- Objective 5: Minimize particulate matter emissions from road and construction sites.
- Objective 6: Link the positive effects of energy conservation and waste management to emission reductions.

San Francisco Health Code Construction Dust Control Ordinance

The San Francisco Health Code Article 22B and San Francisco Building Code §106A.3.2.6 collectively constitute the City's Construction Dust Control Ordinance (adopted in July 2008). The Construction Dust Control Ordinance requires that all site preparation work, demolition, or other construction activities within the City that have the potential to create dust or to expose or disturb more than 10 cubic yards or 500 square feet of soil comply with specific dust control measures whether or not the activity requires a permit from the Department of Building Inspection (DBI). For projects over one-half acre, the Construction Dust Control Ordinance requires that the project sponsor submit a Dust Control Plan for approval by the San Francisco Department of Public Health (DPH) prior to issuance of a building permit by the DBI.

The Construction Dust Control Ordinance requires project sponsors and contractors responsible for construction activities to control construction dust on the site or implement other practices that result in equivalent dust control that are acceptable to the Director of Public Health. Dust suppression activities, referred to as best management practices (BMPs), may include watering all active construction areas sufficiently to prevent dust from becoming airborne; increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water must be used if required by Article 21, §1100 et seq. of the San Francisco Public Works Code. The Construction Dust Control Ordinance has a mandate for "no visible dust." Section 1247 of Article 22B of the Public Health Code requires that all City Agencies that authorize construction or other improvements on City property adopt rules and regulations to ensure that the dust

¹¹City and County of San Francisco, *San Francisco General Plan, Air Quality Element*, 1997, updated 2000, available online at: http://www.sf-planning.org/ftp/General_Plan/I10_Air_Quality.htm, accessed October 16, 2013.

control requirements identified in Article 22B are followed. The BMPs employed in compliance with the City's Construction Dust Control Ordinance provide an effective strategy for controlling fugitive dust. Since the proposed project would be required to comply with the Construction Dust Control Ordinance, particulate matter from fugitive dust is not quantified for this EIR.

San Francisco Health Code Clean Construction Ordinance

Section 6.25 of Chapter 6 of the San Francisco Administrative Code (Clean Construction Ordinance) requires clean construction practices for all City projects that consist of 20 or more cumulative days of construction. The Clean Construction Ordinance requires that off-road equipment and off-road engines with 25 horsepower or greater: 1) be fueled by biodiesel fuel grade B20 or higher; and 2) if used more than 20 hours, either meet or exceed Tier 2 emissions standards³⁹ for off-road engines or operate with the most effective verified diesel emission control technology. The requirement does not apply to portable or stationary generators (engines).

4.12.2 | Affected Environment

4.12.2.1 | AIR POLLUTION CLIMATOLOGY

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. The climate is dominated by the strength and location of a semi-permanent, subtropical high pressure cell. During the summer, the Pacific high pressure cell is centered over the northeastern Pacific Ocean resulting in stable meteorological conditions and a steady northwesterly wind flow. Upwelling of cold ocean water from below to the surface because of the northwesterly flow produces a band of cold water off the California coast. The cool and moisture-laden air approaching the coast from the Pacific Ocean is further cooled by the presence of the cold water band resulting in condensation and the presence of fog and stratus clouds along the Northern California coast. Generally in the winter, the Pacific high weakens and shifts southward, winds tend to flow offshore, upwelling ceases and storms occur. During the winter rainy periods, inversions (layers of warmer air over colder air; see below) are weak or nonexistent, winds are usually moderate and air pollution potential is low. The Pacific high does periodically become dominant, bringing strong inversions, light winds and high pollution potential.

4.12.2.1.1 TOPOGRAPHY

The topography of the SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys and bays. This complex terrain, especially the higher elevations, distorts the normal wind flow patterns in the SFBAAB. The greatest distortion occur when low-level inversions are present and the air beneath the inversion flows independently of air above the inversion, a condition that is common in the summer time.

The only major break in California's Coast Range occurs in the SFBAAB. Here the Coast Range splits into western and eastern ranges. Between the two ranges lies San Francisco Bay. The gap in the western coast range is known as the Golden Gate Bridge and the gap in the eastern coast range is the Carquinez Strait. These gaps allow air to pass into and out of the SFBAAB and the Central Valley.

4.12.2.1.2 WIND PATTERNS

During the summer, winds flowing from the northwest are drawn inland through the Golden Gate and over the lower portions of the San Francisco Peninsula. Immediately south of Mount Tamalpais, the northwesterly winds accelerate considerably and come more directly from the west as they stream through the Golden Gate. This channeling of wind through the Golden Gate produces a jet that sweeps eastward and splits off to the northwest toward Richmond and to the southwest toward San Jose when it meets the East Bay hills.

Wind speeds may be strong locally in areas where air is channeled through a narrow opening, such as the Carquinez Strait, the Golden Gate or the San Bruno gap. For example, the average wind speed at San Francisco International Airport in July is about 17 knots (from 3 p.m. to 4 p.m.), compared with only 7 knots at San Jose and less than 6 knots at the Farallon Islands. The air flowing in from the coast to the Central Valley, called the sea breeze, begins developing at or near ground level along the coast in late morning or early afternoon. As the day progresses, the sea breeze layer deepens and increases in velocity while spreading inland. The depth of the sea breeze depends in large part upon the height and strength of the inversion. If the inversion is low and strong, and hence stable, the flow of the sea breeze will be inhibited and stagnant conditions are likely to result.

In the winter, the SFBAAB frequently experiences stormy conditions with moderate to strong winds, as well as periods of stagnation with very light winds. Winter stagnation episodes are characterized by nighttime drainage flows in coastal valleys. Drainage is a reversal of the usual daytime air-flow patterns; air moves from the Central Valley toward the coast and back down toward the Bay from the smaller valleys within the Air Basin.

4.12.2.1.3 TEMPERATURE

The annual average temperature in the project area is 64°. The project area experiences an average winter temperature of approximately 50.5° and an average summer temperature of approximately 87°.

Summertime temperatures in the SFBAAB are determined in large part by the effect of differential heating between land and water surfaces. Because land tends to heat up and cool off more quickly than water, a large-scale gradient (differential) in temperature is often created between the coast and the Central Valley, and small-scale local gradients are often produced along the shorelines of the ocean and bays. The temperature gradient near the ocean is also exaggerated, especially in summer, because of the upwelling of cold ocean bottom water along the coast. On summer afternoons the temperatures at the coast can be 35°F cooler than temperatures 15 to 20 miles inland. At night this contrast usually decreases to less than 10°.

In the winter, the relationship of minimum and maximum temperatures is reversed. During the daytime the temperature contrast between the coast and inland areas is small, whereas at night the variation in temperature is large.

4.12.2.1.4 PRECIPITATION

Total precipitation in the project area averages approximately 24 inches annually. Precipitation occurs mostly during the winter and relatively infrequently during the summer. Precipitation averages approximately 15 inches during the winter,

approximately 5 inches during the spring, approximately 3 inches during the fall, and less than one inch during the summer.¹²

The SFBAAB is characterized by moderately wet winters and dry summers. Winter rains account for about 75 percent of the average annual rainfall. The amount of annual precipitation can vary greatly from one part of the SFBAAB to another even within short distances. In general, total annual rainfall can reach 40 inches in the mountains, but it is often less than 16 inches in sheltered valleys.

During rainy periods, ventilation (rapid horizontal movement of air and injection of cleaner air) and vertical mixing are usually high, and thus pollution levels tend to be low. However, frequent dry periods do occur during the winter where mixing and ventilation are low and pollutant levels build up.

4.12.2.1.5 AIR POLLUTION POTENTIAL

The potential for high pollutant concentrations developing at a given location depends upon the quantity of pollutants emitted into the atmosphere in the surrounding area or upwind, and the ability of the atmosphere to disperse the contaminated air. The topographic and climatological factors discussed above influence the atmospheric pollution potential of an area. Atmospheric pollution potential, as the term is used here, is independent of the location of emission sources and is instead a function of factors described below.

4.12.2.1.6 WIND CIRCULATION

Low wind speed contributes to the buildup of air pollution because it allows more pollutants to be emitted into the air mass per unit of time. Light winds occur most frequently during periods of low sun (fall and winter, and early morning) and at night. These are also periods when air pollutant emissions from some sources are at their peak, namely, commute traffic (early morning) and wood burning appliances (nighttime). The problem can be compounded in valleys, when weak flows carry the pollutants upvalley during the day, and cold air drainage flows move the air mass down-valley at night. Such restricted movement of trapped air provides little opportunity for ventilation and leads to buildup of pollutants to potentially unhealthful levels.

Wind-roses provide useful information for communities that contain industry, landfills or other potentially odorous or noxious land uses. Each wind-rose diagram provides a general indication of the proportion of time that winds blow from each compass direction. The longer the vector length, the greater the frequency of wind occurring from that direction. Such information may be particularly useful in planning buffer zones. For example, sensitive receptors such as residential developments, schools or hospitals are inappropriate uses immediately downwind from facilities that emit toxic or odorous pollutants, unless adequate separation is provided by a buffer zone. Caution should be taken in using wind-roses in planning and environmental review processes. A site on the opposite side of a hill or tall building, even a short distance from a meteorological monitoring station, may

¹²Western Regional Center, Historical Climate Information, available at <http://www.wrcc.dri.edu>, accessed October 4, 2011.

experience a significant difference in wind pattern. Consult BAAQMD meteorologists if more detailed wind circulation information is needed.

4.12.2.1.7 INVERSIONS

An inversion is a layer of warmer air over a layer of cooler air. Inversions affect air quality conditions significantly because they influence the mixing depth, i.e., the vertical depth in the atmosphere available for diluting air contaminants near the ground. The highest air pollutant concentrations in the SFBAAB generally occur during inversions.

There are two types of inversions that occur regularly in the SFBAAB. One is more common in the summer and fall, while the other is most common during the winter. The frequent occurrence of elevated temperature inversions in summer and fall months acts to cap the mixing depth, limiting the depth of air available for dilution. Elevated inversions are caused by subsiding air from the subtropical high pressure zone, and from the cool marine air layer that is drawn into the SFBAAB by the heated low pressure region in the Central Valley.

The inversions typical of winter, called radiation inversions, are formed as heat quickly radiates from the earth's surface after sunset, causing the air in contact with it to rapidly cool. Radiation inversions are strongest on clear, low-wind, cold winter nights, allowing the build-up of such pollutants as carbon monoxide and particulate matter. When wind speeds are low, there is little mechanical turbulence to mix the air, resulting in a layer of warm air over a layer of cooler air next to the ground. Mixing depths under these conditions can be as shallow as 50 to 100 meters, particularly in rural areas. Urban areas usually have deeper minimum mixing layers because of heat island effects and increased surface roughness. During radiation inversions downwind transport is slow, the mixing depths are shallow, and turbulence is minimal, all factors which contribute to ozone formation.

Although each type of inversion is most common during a specific season, either inversion mechanism can occur at any time of the year. Sometimes both occur simultaneously. Moreover, the characteristics of an inversion often change throughout the course of a day. The terrain of the SFBAAB also induces significant variations among subregions.

4.12.2.1.8 SOLAR RADIATION

The frequency of hot, sunny days during the summer months in the SFBAAB is another important factor that affects air pollution potential. It is at the higher temperatures that ozone is formed. In the presence of ultraviolet sunlight and warm temperatures, reactive organic gases and oxides of nitrogen react to form secondary photochemical pollutants, including ozone.

Because temperatures in many of the SFBAAB inland valleys are so much higher than near the coast, the inland areas are especially prone to photochemical air pollution. In late fall and winter, solar angles are low, resulting in insufficient ultraviolet light and warming of the atmosphere to drive the photochemical reactions. Ozone concentrations do not reach significant levels in the SFBAAB during these seasons.

4.12.2.1.9 SHELTERED TERRAIN

The hills and mountains in the SFBAAB contribute to the high pollution potential of some areas. During the day, or at night during windy conditions, areas in the lee sides of mountains are sheltered from the prevailing winds, thereby reducing turbulence and downwind transport. At night, when wind speeds are low, the upper atmospheric layers are often decoupled from the surface layers during radiation conditions. If elevated terrain is present, it will tend to block pollutant transport in that direction. Elevated terrain also can create a recirculation pattern by inducing upvalley air flows during the day and reverse downvalley flows during the night, allowing little inflow of fresh air.

The areas having the highest air pollution potential tend to be those that experience the highest temperatures in the summer and the lowest temperatures in the winter. The coastal areas are exposed to the prevailing marine air, creating cooler temperatures in the summer, warmer temperatures in winter, and stratus clouds all year. The inland valleys are sheltered from the marine air and experience hotter summers and colder winters. Thus, the topography of the inland valleys creates conditions conducive to high air pollution potential.

4.12.2.1.10 POLLUTION POTENTIAL RELATED TO EMISSIONS

Although air pollution potential is strongly influenced by climate and topography, the air pollution that occurs in a location also depends upon the amount of air pollutant emissions in the surrounding area or transported from more distant places. Air pollutant emissions generally are highest in areas that have high population densities, high motor vehicle use and/or industrialization. These contaminants created by photochemical processes in the atmosphere, such as ozone, may result in high concentrations many miles downwind from the sources of their precursor chemicals.

4.12.2.2 | LOCAL CLIMATE

The peninsula region extends from northwest of San Jose to the Golden Gate. The Santa Cruz Mountains run up the center of the peninsula, with elevations exceeding 2000 feet at the southern end, decreasing to 500 feet in South San Francisco. Coastal towns experience a high incidence of cool, foggy weather in the summer. Cities in the southeastern peninsula experience warmer temperatures and fewer foggy days because the marine layer is blocked by the ridgeline to the west. San Francisco lies at the northern end of the peninsula. Because most of San Francisco's topography is below 200 feet, marine air is able to flow easily across most of the City, making its climate cool and windy.

The blocking effect of the Santa Cruz Mountains results in variations in summertime maximum temperatures in different parts of the peninsula. For example, in coastal areas and San Francisco the mean maximum summer temperatures are in the mid-60's, while in Redwood City the mean maximum summer temperatures are in the low-80's. Mean minimum temperatures during the winter months are in the high-30's to low-40's on the eastern side of the Peninsula and in the low 40's on the coast.

Two important gaps in the Santa Cruz Mountains occur on the peninsula. The larger of the two is the San Bruno Gap, extending from Fort Funston on the ocean to the San Francisco Airport. Because the gap is oriented in the same northwest to

southeast direction as the prevailing winds, and because the elevations along the gap are less than 200 feet, marine air is easily able to penetrate into the bay. The other gap is the Crystal Springs Gap, between Half Moon Bay and San Carlos. As the sea breeze strengthens on summer afternoons, the gap permits maritime air to pass across the mountains, and its cooling effect is commonly seen from San Mateo to Redwood City.

Annual average wind speeds range from 5 to 10 mph throughout the peninsula, with higher wind speeds usually found along the coast. Winds on the eastern side of the peninsula are often high in certain areas, such as near the San Bruno Gap and the Crystal Springs Gap. The prevailing winds along the peninsula's coast are from the west, although individual sites can show significant differences. For example, Fort Funston in western San Francisco shows a southwest wind pattern while Pillar Point in San Mateo County shows a northwest wind pattern. On the east side of the mountains winds are generally from the west, although wind patterns in this area are often influenced greatly by local topographic features.

Air pollution potential is highest along the southeastern portion of the peninsula. This is the area most protected from the high winds and fog of the marine layer. Pollutant transport from upwind sites is common. In the southeastern portion of the peninsula, air pollutant emissions are relatively high due to motor vehicle traffic as well as stationary sources. At the northern end of the peninsula in San Francisco, pollutant emissions are high, especially from motor vehicle congestion. Localized pollutants, such as carbon monoxide, can build up in "urban canyons." Winds are generally fast enough to carry the pollutants away before they can accumulate.

Within the proposed project site and its vicinity, the average wind speed, as recorded at the San Francisco/International Airport Wind Monitoring Station, is approximately 10 miles per hour. Wind in the vicinity of the proposed project site predominately blows from the northwest.

The annual average temperature in the Geary corridor, as recorded at the San Francisco Mission Dolores Station, is approximately 57°F. Geary corridor area experiences an average winter temperature of approximately 52°F and an average summer temperature of approximately 60°F. Total precipitation in the proposed project area averages approximately 21 inches annually. Precipitation occurs mostly during the winter and relatively infrequently during the summer.

4.12.2.3 | AIR QUALITY

The federal and state governments have established ambient air quality standards for outdoor concentrations of six common pollutants, called criteria pollutants, to protect public health. The criteria pollutant standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants and effects overview

Other air quality issues of concern in the Air Basin include nuisance impacts of odors and dust. Objectionable odors may be associated with a variety of pollutants. Odors rarely have direct health impacts, but they can be unpleasant and can lead to

anger and concern over possible health effects among the public. Each year the BAAQMD receives thousands of citizen complaints about objectionable odors.¹³

Similarly, nuisance dust may be generated by a variety of sources including quarries, agriculture, grading and construction. Dust emissions can contribute to increased ambient concentrations of PM₁₀, and can also contribute to reduced visibility and soiling of exposed surfaces.

4.12.2.4 | AIR MONITORING DATA

BAAQMD monitors air quality conditions at 23 locations throughout the Bay Area. The nearest air monitoring station to the proposed project site is the San Francisco Arkansas Street Monitoring Station. The Arkansas Street Monitoring Station is approximately 7.7 miles from the intersection of 48th Avenue and Geary Boulevard, and 3.8 miles from the intersection of Divisadero Street and Geary Boulevard. The Arkansas Street Monitoring Station is representative of air quality conditions throughout the Geary corridor. Historical data from the Arkansas Street Monitoring Station was used to characterize existing conditions within the vicinity of the proposed project area and to establish a baseline for estimating future conditions with and without the proposed project. Table 4.12-2 shows air quality recorded during the 2009 to 2012 period.

Table 4.12-2 2009-2012 Ambient Air Quality Data in Project Vicinity

POLLUTANT	POLLUTANT CONCENTRATION & STANDARDS	NUMBER OF DAYS ABOVE STATE STANDARD			
		2009	2010	2011	2012
Ozone (O ₃)	Maximum 1-hr Concentration (ppm)	0.07	0.08	0.07	0.07
	Days > 0.09 ppm (State 1-hr standard)	0	0	0	0

SOURCE: CARB, Historical Data by Year, available at <http://www.arb.ca.gov/adam/welcome.html>, accessed January 7, 2014.

The San Francisco Department of Public Health has created a map that displays PM_{2.5} concentrations resulting from vehicle emissions on City streets.¹⁴ The map shows potential roadway exposure zone, which means those areas within the City and County of San Francisco which, by virtue of their proximity to freeways and major roadways, may exhibit high PM_{2.5} concentration attributable to local roadway traffic sources. Based on dispersion model analysis, the Gear corridor currently has a relatively greater level of road traffic air pollution and associated air pollution health risks.

In addition to monitoring criteria air pollutants, both the BAAQMD and the CARB operate TAC monitoring networks in the SFBAAB. These stations measure 10 to 15 TACs, depending on the specific station. The TACs selected for monitoring are those that have traditionally been found in the highest concentrations in ambient air, and therefore tend to be substantial contributors to community health risk. The BAAQMD operates an ambient TAC monitoring station at its 16th and Arkansas streets facility, which is the only monitoring site for air toxics in the City. Table 4.12-3 shows ambient concentrations of carcinogenic TACs measured at the Arkansas Street station and the estimated cancer risks from lifetime (70 years) exposure to these substances. When TAC measurements at this station are compared to ambient concentrations of various TACs for the Bay Area as a whole, the cancer risks associated with mean TAC concentrations in the City are similar to those for the Bay Area. Therefore, the estimated average lifetime cancer risk resulting from exposure to TAC concentrations measured at the Arkansas Street air monitoring station do not appear to be any greater than for the Bay Area as a region.

Table 4.12-3 Measurement of Carcinogenic Toxic Air Contaminants - Concentrations at Arkansas Street Station and Estimated Cancer Risk from Lifetime Exposure

SUBSTANCE	CONCENTRATION	CANCER RISK PER MILLION/A/

4.12.2.5 | SENSITIVE RECEPTORS

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. CARB has identified the following groups who are most likely to be affected by air pollution: children under 14, the elderly over 65 years of age, athletes, and people with cardiovascular and chronic respiratory diseases. Typically, sensitive receptors include residences, schools, playgrounds, child-care centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. All of sensitive receptors discussed above are located within 1,000 feet of the approximately four miles Geary Corridor.

4.12.3 | Environmental Consequences

This section summarizes effects of the project alternatives regarding on regional and local air quality. The various regulatory requirements described in Section 4.10.1 above require consideration of potential consequences through several means. According, this section is organized as follows:

- Section 4.10.3.1: Transportation Conformity with Federal Clean Air Act
- Section 4.10.3.2: Consistency with Applicable Air Quality Plan
- Section 4.10.3.3: Operational Period Air Pollutant and Greenhouse Gas Emissions
- Section 4.10.3.4: Operational Period Health Risks/Toxic Air Contaminants
- Section 4.10.3.5: Operational Period Odor Effects
- Section 4.10.3.6: Construction Period Air Quality and Greenhouse Gas Emissions
- Section 4.10.3.7: Construction Period Health Risks/Toxic Air Contaminants
- Section 4.10.3.8 Construction Period Odor Effects

4.12.3.1 | TRANSPORTATION CONFORMITY WITH FEDERAL CLEAN AIR ACT

Transportation conformity is required under CAA section 176(c) (42 U.S.C. 7506(c)) to ensure that federally supported highway and transit project activities are consistent with the purpose of the SIP. Conformity to the purpose of the SIP means that transportation activities will not cause new air quality violations, worsen existing violations, or delay timely attainment of the relevant NAAQS. USEPA’s transportation conformity rule (40 CFR 51.390 and Part 93) establishes the criteria

and procedures for determining whether transportation activities conform to the SIP. Under the criteria, transportation projects must demonstrate conformity on regional and local levels.

4.12.3.1.1 REGIONAL CONFORMITY

The current RTP is the *2035 Plan for the San Francisco Bay Area*. The proposed project is listed in the plan. Both FHWA and the Federal Transit Administration (FTA) made a regional conformity determination for the current RTP in May 2009.

The proposed project is also included in the 2013 TIP. FHWA and FTA approved the 2013 TIP on August 12, 2013.

The design, concept, and scope of the proposed project is consistent with the project descriptions in the RTP and TIP, and also with the “open to traffic” assumptions of the regional emissions analysis MTC conducted in association with its adoption of the RTP. Therefore, the proposed project is considered to have demonstrated regional conformity.

4.12.3.1.2 PROJECT CONFORMITY

Carbon Monoxide Hotspot Analysis

To demonstrate conformity, a project must not cause or contribute to new localized carbon monoxide violations or increase the frequency or severity of existing carbon monoxide violations. According to BAAQMD, air quality monitors have not recorded an air exceedance of the federal carbon monoxide standards since at least 1994. Carbon monoxide concentrations throughout the state have steadily declined over time as vehicle engines have become more efficient and less polluting. The BAAQMD has recognized this trend and completed technical analyses that indicate that there is no potential for a carbon monoxide hotspot to occur when:

- Project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; or
- Project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway). The fact that the Geary corridor study area is a highly developed urban area with multi-story buildings and contains streets with canyon-like air dispersion characteristics means that this criterion may be applied to certain blocks along the Geary corridor and some of its parallel streets.

None of the alternatives would increase traffic volumes at any intersection in the traffic study area to more than 24,000 vehicles per day.¹⁵ There is no potential for a new localized carbon monoxide violation and further analysis of carbon monoxide concentrations is not required.

¹⁵ The traffic study area includes not only Geary Street/Boulevard but also portions of O’Farrell Street and other streets) to more than 24,000 vehicles per hour

PM_{2.5}/PM₁₀ Hotspot Analyses

Qualitative PM hotspot analysis is required under the USEPA Transportation Conformity rule for Projects of Air Quality Concern (POAQC). Projects that are not POAQC are not required to complete a detailed PM hotspot analysis.

The proposed project is not considered a POAQC because it does not meet the definition of a POAQC as defined in USEPA's Transportation Conformity Guidance. The proposed project would not increase the percentage of diesel vehicles on the roadway, does not involve a bus or rail terminal that significantly increases diesel vehicles, and is not identified in the SIP as a possible PM_{2.5} or PM₁₀ violation site. The proposed project has undergone Interagency Consultation (IAC). IAC participants concurred that the proposed project is not a POAQC.

4.12.3.2 | COMPLIANCE WITH APPLICABLE AIR QUALITY PLAN

The most recently adopted air quality plan for the Air Basin is the 2010 Clean Air Plan (2010 CAP).¹⁶ In determining consistency with the 2010 CAP this analysis considers whether the project would: (1) support the primary goals of the 2010 CAP, (2) include applicable control measures from the 2010 CAP, and (3) disrupt or hinder implementation of control measures identified in the 2010 CAP.

The primary goals of the 2010 CAP are to attain air quality standards, reduce pollutant exposure and protect public health, and reduce greenhouse gas (GHG) emissions. The discussion of project GHG emissions presented demonstrated that the proposed project would comply with the applicable provisions of the City's Greenhouse Gas Reduction Strategy.

The proposed project is a transit project with the goal of making the SFMTA transit system more efficient, thus attracting a greater portion of commuters to use bus instead of private passenger vehicles along the Geary corridor. Implementation of any of the project alternatives, including the No Build Alternative, would result in short-term criteria pollutant emissions during construction.

However, replacement of standard motor coaches with diesel-hybrid electric buses would result in a decrease in several pollutants over the long-term. The analysis herein illustrates that neither construction nor operation of any of the project alternatives would result in emissions of criteria air pollutants that would impede attainment of air quality standards. The construction and operational health risk assessment demonstrates that implementation of any of the project alternatives would not substantially increase risks to public health.

As none of the project alternatives would result in substantial, long-term increases in criteria air pollutants, would not expose receptors to substantial pollutant concentrations, and would not result in substantial, long-term increases in GHG emissions, all of the project alternatives would support the primary goals of the 2010 CAP.

The measures most applicable to the proposed project are transportation control measures (TCMs), which are strategies to reduce vehicle trips, vehicle use, vehicle

¹⁶BAAQMD, Bay Area 2010 Clean Air Plan, September 15, 2010. Available online at: <http://www.baaqmd.gov/Divisions/Planning-and-Research/Plans/Clean-Air-Plans.aspx>. Accessed February 13, 2014.

miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions and Mobile Source Measures, which are strategies involving use of more advanced and less polluting fleet of vehicles. The 2010 CAP includes 17 TCMs to improve transit service, improve system efficiency, encourage sustainable travel behavior, support focused growth, and implement pricing strategies. The TCMs for the 2010 CAP were developed by reviewing the 2005 Ozone Strategy measures and modifying and expanding them based on new investment and policy decisions. In particular, the TCMs have been updated to reflect the policy and investment decisions made in MTC's regional transportation plan, *Transportation 2035: Change in Motion*.¹⁷ Implementation of the project alternatives would be consistent with the following 2010 CAP TCMs:

TCM A-1 Improve Local and Areawide Bus Service - Improve transit by providing new Express Bus or Bus Rapid Transit on major travel corridors, fund replacement of older buses, and implement Transit Priority Measures on key transit routes.

TCM D-3 Support Local Land Use Strategies - Promote land use patterns, policies, and infrastructure investments that support mixed-use, transit-oriented development that reduce motor vehicle dependence and facilitate walking, bicycling and transit use. An evaluation of the 2010 CAP's 55 control measures determined that the Proposed Project would not disrupt or hinder implementation of any of the CAP's 55 control measures.

For the reasons stated above, the proposed project would support, not interfere with implementation of the 2010 CAP. Therefore, the proposed project would be consistent with the most recent air quality plan that shows how the region will improve ambient air quality and achieve state and federal ambient air quality standards.

4.12.3.3 | OPERATIONAL PERIOD CRITERIA AIR POLLUTANT AND GREENHOUSE GAS EMISSIONS

The proposed project would generate operational emissions associated with a shift in regional passenger vehicles miles traveled and new buses servicing Geary Avenue. The operational analysis focused on estimating emissions associated with changes to transit and non-transit vehicle miles traveled (VMT). Passenger vehicle emissions were estimated using VMT and speed data shown in Table 4.12-4. Emission rates were obtained from the CARB EMFAC2011 Motor Vehicle Emissions Inventory Model.

¹⁷Metropolitan Transportation Commission, Change in Motion, Transportation 2035 Plan for the San Francisco Bay Area, Final, April 2009. Available online at: http://www.mtc.ca.gov/planning/2035_plan/. Accessed February 13, 2014.

Regarding transit activity, existing buses were assumed to be a typical standard motor coach manufactured in 1999. Urban buses manufactured between 1999 and 2002 are required to meet the same diesel particulate matter (DPM) and NO_x emission standards. Therefore, it is assumed that all buses are equipped with Cleaire Longview CARE-verified Level 3 emission control technology or equivalent. Existing emissions were estimated using emission rates from EMFAC2011, which includes emission rates in grams per mile and applying 25 percent NO_x and 85 percent DPM reductions to account for the use of the emission control technology.

It is anticipated that the current fleet of 86 diesel hybrid-electric buses (DHEB) will be expanded beginning in 2014. All buses will be DHEB by 2019. DHEBs achieve at least a 25 percent reduction in engine NO_x emissions when compared to a non-hybrid bus of the same year and 2035. Emissions were estimated by using EMFAC2011 emission rates for a 2014 urban bus and applying a 25 percent NO_x reduction to those emissions.

SFMTA has indicated that weekend transit VMT is approximately 75 percent of weekday transit VMT. The SFMTA operates the weekday schedule 253 days per year and operates Saturday and Sunday schedules 54 and 58 days per year, respectively. These factors were used to estimate annual VMT:

$$\Delta VMT_A = 253 \times \Delta VMT_{WD} + 75\% \times (112 \times \Delta VMT_{WD})$$

Where:

- ΔVMT_A: increase in annual transit VMT
- ΔVMT_{WD}: increase in annual weekly transit VMT

To quantify the effects on regional air quality resulting from a travel mode shift as a result of increased transit efficiency, or implementation of the improvements of the Proposed Project, this analysis used data provided by the SFCTA San Francisco Chained Activity Model Process (SF-CHAMP) model, which provides estimates of the change in weekday non-transit VMT.¹⁸ The change in non-transit VMT has been annualized assuming that Saturday VMT is 85.8 percent and Sunday is 77.7 percent of weekday VMT.¹⁹ Therefore, the conversion of weekday VMT to annual VMT was performed as follows:

$$\Delta VMT_A = 261 \times \Delta VMT_{WD} + 85\% \times (52 \times \Delta VMT_{WD}) + 77.7\% \times (52 \times \Delta VMT_{WD})$$

Where:

- ΔVMT_A: increase in annual non-transit VMT
- ΔVMT_{WD}: increase in annual non-weekly transit VMT

Table 4.10-5 below summarizes operational period criteria air pollutant and GHG emissions for each of the build alternatives. The VMT and speed estimates were included in the air quality modeling.²⁰ Implementation of any of the build alternatives would generate operational emissions associated with a shift in regional

¹⁸SF-CHAMP is a state-of-the-art, activity-based model that predicts future travel patterns for the City.

4.10.3.2.1 NO BUILD ALTERNATIVE

Under the No Build Alternative, transit and transportation facilities and services would remain unaltered except for changes that are currently planned or programmed to be implemented in the Geary corridor by 2020. Most of these improvements would have a negligible effect on operational air pollutant emissions. However, one planned improvement is the replacement of current diesel buses with lower emissions diesel hybrid electric buses. This aspect of the No Build Alternative would represent a beneficial effect relative to existing conditions in terms of both criteria air pollutants and greenhouse gas emissions.

4.12.3.3.2 ALTERNATIVE 2: SIDE-LANE BRT

Alternative 2 and all other build alternatives also include the replacement of current diesel buses with lower emissions diesel hybrid electric models.

By the year 2020, Alternative 2 would result in modest decreases in countywide emissions of PM but no measurable decrease in other criteria pollutants. However, GHG emissions would increase by less than 1 percent relative to existing conditions. The increase is likely due to a combination of factors, including the removal of left turns along the Geary corridor. Notwithstanding, the increase in GHG emissions would be far less than the threshold (25,000 metric TPY of CO₂e) that the CEQ suggests using as an indicator of substantial emissions.

By 2035, both PM and criteria pollutants would drop modestly relative to the No Build Alternative. Moreover, GHG emissions would decrease by 2,015 metric TPY relative to the No Build Alternative. This is a result of increased ridership associated with a mature transit system and various cumulative projects that will feed riders into the system. Therefore, Alternative 2 would result in long-term benefits in reducing both criteria pollutants and GHG emissions.

4.12.3.3.3 ALTERNATIVE 3: CENTER-LANE BRT WITH DUAL MEDIANS AND PASSING LANES

Alternative 3 operational criteria pollutant and GHG emissions are shown in Table 4.10-5. Countywide near-term (2020) regional criteria pollutant emissions would

decrease modestly for all criteria pollutants compared to the 2020 No Build Alternative. GHG emissions would decrease by approximately 1,300 metric TPY of CO₂e compared to the No Build Alternative. These reductions in emissions would result in a beneficial effect under Alternative 3 by 2020.

Regarding far-term (2035), emissions for all of the analyzed pollutants would decrease when comparing Alternative 3 to the 2020 No Build Alternative. This is a result of increased ridership associated with a mature transit system and various cumulative projects that will feed riders into the system. Therefore, Alternative 3 would result in a beneficial effect related to operational criteria pollutant and GHG emissions by 2035.

4.12.3.3.4 ALTERNATIVE 3-CONSOLIDATED: CENTER-LANE BRT WITH DUAL MEDIANS AND CONSOLIDATED BUS SERVICE

Alternative 3-Consolidated operational criteria pollutant and GHG emissions are shown in Table 4.10-5. Near-term (2020) countywide regional criteria air pollutant emissions would decrease modestly in 2020 compared to the No Build Alternative. Criteria pollutant emissions reduction would be greater under Alternative 3-Consolidated for reactive organic gases, nitrogen oxides, and PM₁₀ than under any of the other build alternatives. GHG emissions would decrease by approximately 2,500 metric TPY compared to the No Build Alternative. This is the greatest reduction in GHGs for any of the build alternatives. Therefore, Alternative 3-Consolidated would result in the greatest beneficial effect related to operational criteria pollutant and GHG emissions by 2020.

By 2035, both criteria air pollutant and GHG emissions would decrease further compared to the No Build Alternative. Therefore, Alternative 3-Consolidated would result in a beneficial effect related to operational criteria pollutant and GHG emissions by 2035.

4.12.3.3.5 HYBRID ALTERNATIVE

Hybrid Alternative operational emissions are shown in Table 4.10-5. Countywide regional criteria pollutant and GHG emissions would decrease in 2020 and 2035 compared to the No Build Alternative. GHG emissions would decrease by 5,841 metric TPY by 2035, representing the greatest reduction in GHGs compared to the No Build Alternative. Therefore, the Hybrid Alternative would result in a beneficial effect related to operational criteria pollutant and GHG emissions in both the near- and far-term.

4.12.3.4 | OPERATIONAL HEALTH RISK AND TOXIC AIR CONTAMINANTS

An analysis was completed to assess health risk associated with increased bus activity. The roadway segment on Geary Boulevard between Masonic Avenue and Collins Street was identified as the segment with highest project-related increase in bus VMT. Pollutant concentrations were estimated using a similar methodology as described for the regional emissions analysis. Pollutant dispersion was modeled using AERMOD, which considered two source locations: 1) side of the roadway for Alternative 2 and 2) the center lane for Alternative 3, 3C, and the Hybrid Alternative.

The analysis indicated that Alternative 2 would result in a higher risk than the other build alternatives. This is because Alternative 2 would be side-running and the

emissions source (buses) would be located closer to the residences than the center-running BRT. Table 4.13-6 shows the risk associated with Alternative 2. The carcinogenic, chronic, and acute risks, along with the annual average PM_{2.5} concentration would be less than the BAAQMD significance thresholds. Alternatives 3, 3C, and the Hybrid Alternative would result in a lower risk. Therefore, the proposed project would result in a less-than-significant impact related to health risk.

Table 4.12-6 Operational Health Risk Assessment

HEALTH RISK TYPE	UNIT OF MEASUREMENT	THRESHOLD	MAXIMUM HEALTH RISK
EXCESS CANCER RISK	PROBABILITY PER ONE MILLION POPULATION	10	2
CHRONIC HEALTH RISK	HEALTH INDEX	1.0	0.001
ACUTE HEALTH RISK	HEALTH INDEX	1.0	0.004
INCREASE IN PM _{2.5} CONCENTRATION	AVERAGE ANNUAL (MG/M ³)	0.3	0.005

SOURCE: TAHA, 2014.

4.12.3.5 | OPERATIONAL PERIOD ODOR EFFECTS

Land uses and industrial operations that are associated with odor complaints include wastewater treatment plants, landfills, confined animal facilities, composting stations, food manufacturing plants, refineries, and chemical plants. The proposed project would not include any land use or activity that typically generates adverse odors.

4.12.3.6 | CONSTRUCTION PERIOD EMISSIONS

4.12.3.6.1 CONSTRUCTION EMISSIONS: NO BUILD ALTERNATIVE

Under the No Build Alternative, transit and transportation facilities and services would remain unaltered except for changes that are currently planned or programmed to be implemented in the Geary corridor by 2020. These projects have already undergone or will undergo individual environmental review, in which construction emissions would be analyzed. Given the relatively small scale of the improvements comprising the No Build Alternatives, no adverse effects relative to regional construction emissions are expected.

4.12.3.6.2 CONSTRUCTION EMISSIONS: BUILD ALTERNATIVES

Construction activity would generate air emissions from various sources, including equipment engines, truck engines, and earthwork activity. All build alternatives would comply with San Francisco Health Code Article 22B and San Francisco Building Code §106A.3.2.6, which collectively constitute the City’s Construction Dust Control Ordinance (adopted in July 2008). They would also comply with Section 6.25 of Chapter 6 of the San Francisco Administrative Code (Clean Construction Ordinance), which requires clean construction practices for all City projects that consist of 20 or more cumulative days of construction. The Clean Construction Ordinance requires that off-road equipment and off-road engines with 25 horsepower or greater: 1) be fueled by biodiesel fuel grade B20 or higher; and 2) if used more than 20 hours, either meet or exceed Tier 2 emissions standard for off-road engines or operate with the most effective verified diesel emission control technology. The requirement does not apply to portable or stationary generators

(engines). Compliance with these regulations would control fugitive dust emissions and substantially reduce exhaust emissions associated with standard construction equipment.

From an air quality perspective (e.g., equipment use), the majority of construction activity would be similar for the various alternatives. However, construction activity associated with bringing Fillmore Street to grade (Alternatives 3 and 3-Consolidated) would generate the maximum emissions as a result of additional truck and equipment activity. Regional construction emissions associated with these scenarios are presented in Table 4.10-7 for Alternatives 3, 3-Consolidated,. Table 4.10-7 also includes emissions for Alternative 2, which represents a typical segment that includes fewer truck trips and less equipment activity than needed to bring Fillmore Street to grade level. Accordingly, Alternative 2 is projected to result in lower daily levels of emissions. As shown in Table 4.10-7, each of the build alternatives is projected to generate daily emissions of criteria pollutants below applicable thresholds. Therefore, none of the alternatives would result in an adverse effect regarding construction period emissions.

Table 4.12-7 Estimated Daily Construction Emissions for all Build Alternatives

CRITERIA POLLUTANT OR OZONE PRECURSOR	POUNDS PER DAY			
	ROG	NOX	PM ₁₀	PM _{2.5}
Alternative 2				
General Construction Emissions	6	24	1	1
Roadway Striping	3	--	--	--
Regional Significance Threshold	54	54	82	54
Exceed Threshold?	No	No	No	No

Exceed Threshold?	No	No	No	No

SOURCE: OFFROAD, 2011 and TAHA, 2014.

4.12.3.7 | CONSTRUCTION PERIOD HEALTH RISK AND TOXIC AIR CONTAMINANTS

It is anticipated that highest risk to public health would be associated with bringing Fillmore Street to grade under Alternatives 3, 3-Consolidated, and the Hybrid Alternative. This segment would experience the highest level of construction intensity in terms of equipment use and truck activity. As shown in Table 4.10-7,

construction activity would not generate emissions that would exceed the BAAQMD health risk significance thresholds. Construction activity associated with Alternative 2 or a typical segment for Alternatives 3, 3-Consolidated, and the Hybrid Alternative would result in lower risks. Therefore, implementation of the build alternatives would not result in adverse impacts related to construction health risk.

Table 4.12-8 Construction Health Risk Assessment

HEALTH RISK TYPE	UNIT OF MEASUREMENT	FILLMORE STREET	THRESHOLD
Excess Cancer Risk (per million)	Probability per one million population	0.95	10
Chronic Health Risk	Health Index	0.06	1
Acute Health Risk	Health Index	0.45	1
Increase in PM Concentration	Annual Average ($\mu\text{g}/\text{m}^3$)	0.286	0.3

SOURCE: TAHA, 2014.

4.12.3.7.2 DEMOLITION AND RENOVATION OF ASBESTOS-CONTAINING MATERIALS

None of the build alternatives would involve the demolition or renovation of any materials containing asbestos. As described above, the construction associated with each build alternative involves re-paving the corridor, and installing new transportation infrastructure. Therefore, demolition and renovation would not result in any adverse impacts related to asbestos-containing materials for any of the build alternatives.

4.12.3.7.3 NATURALLY OCCURRING ASBESTOS

None of the features of any of the build alternatives are located in an area near NOA, and the grading associated with each of the build alternatives has the potential to expose nearby residents. The implementation of the Basic Construction Mitigation Measures would control NOA exposure to the greatest extent feasible. NOA exposure would not result in any adverse impacts for any of the build alternatives.

4.12.3.8 | CONSTRUCTION RELATED ODORS

Equipment exhaust and paving activities would result in odor emissions for each of the build alternatives. Odors would be localized and generally confined to the construction area. Each build alternative would utilize typical construction techniques, and the odors would be typical of most construction sites and temporary in nature. Construction activity would not cause an odor nuisance, and construction odors would not result in any adverse impacts for any of the build alternatives.

4.12.4 | Avoidance, Minimization, and/or Mitigation Measures

None of the alternatives would result in any adverse effects, either during operation or construction, related to emissions of air pollutants and greenhouse gases. Therefore, no avoidance, minimization, or mitigation measures are necessary.
